Re: Blue Cross and Blue Shield of Vermont
2015 Exchange Filing
SERFF Tracking #: BCVT-129572217

Dear Jude Daye:

We have been retained by the Green Mountain Care Board ("GMCB") to review the above referenced group products filing submitted on 6/2/2014. The following additional information is required for this filing.

Questions:

1. Pediatric Dental
 - a. Provide quantitative support for the \$42.49 allowed charges for pediatric dental. How does this figure reconcile to the projected dental costs found in the Milliman report?
 - b. We note that "there is a considerable amount of uncertainty" in the projected pediatric dental claims costs. Was any margin included in the pediatric dental claims costs to reflect this uncertainty?
 - c. Provide the benefit richness adjustments used in 2015 for each pediatric dental plan. Why was this adjustment assumed to be prohibited in 2014 but not in 2015?

- d. Please clarify how these projected dental amounts are representative of the estimated incremental cost of dental services relative to the medical cost estimates developed by BCBSVT, in light of the medical claims being applied to the deductible and out-of-pocket maximum prior to the dental claims.
2. Pediatric Vision
 - a. Per the response to question 5b dated June 16th, 2014, please provide support for the projected allowed claims for pediatric vision. We have included the question below for your convenience.

Describe the source of each of the benefits listed below in more detail. Is the data based on insured members? Were adjustments made to the data to fit the population that will be covered?
 - b. We note that it was “assumed that the paid benefits would not be materially different from the allowed charges.” Please clarify if this means that zero cost sharing was assumed for pediatric vision benefits.
 - c. Please provide a quantitative estimate of the cost sharing for pediatric vision benefits.
3. Pharmacy Trend
 - a. Please provide quantitative and further qualitative support for the adjustment made to account for the expected May 2014 launch of generic Copaxone.
4. Medical Trend
 - a. Please provide a quantitative demonstration of the expected cost shift due to the proposed 1.6% increase for Medicaid rates.
5. Base Experience Period
 - a. We note that the fourth quarter of 2013 was impacted by a significant increase in utilization leading up to the implementation of Vermont Health Connect. Was any consideration given to using a different base experience period? For example, the experience from October 1, 2012 to September 30, 2013 would exclude the increased utilization leading up to the implementation of Vermont Health Connect.
6. Population Risk Morbidity
 - a. Please provide quantitative support for the average age-gender factors used to calculate the factors below shown in Exhibit 5:
 - i. (1+b₉) The Impact of the Health Status of the Newly Insured
 - ii. (1+c₃) Changes in demographics (age, gender, region, etc.)
7. Other Adjustments
 - a. We note that in the response to question 7a dated June 16th, 2014 that 74% of the CY 2013 pharmacy rebates were estimated. Has the company received any additional information regarding the CY 2013 rebates since the initial filing was made? Is this lag associated with the CY 2013 rebates typical for the Company?

8. Transitional Reinsurance Recoveries

- a. Please provide additional quantitative support for the expected reinsurance recoveries for individual members. The additional support should include the frequency and average allowed claims used in the calculation for both the 2014 and 2015 reinsurance recoveries split into the following categories:
 - i. < \$60,000
 - ii. \$60,000 - \$70,000
 - iii. \$70,000 - \$250,000
 - iv. \$250,000 +

9. Benefit Richness Adjustment

- a. Please provide further support that the “use of group data minimizes the potential for selection bias within the experience period data.” To what degree do the members of the groups in the experience period data have choices between plans with different actuarial values?

10. Administrative Expenses

- a. Please provide the CY 2013 Supplemental Health Care Exhibit and reconcile to the 2013 figures provided in the previous response.

11. Taxes and Fees

- a. We note that the 2014 estimate of the Federal Insurer Fee was increased by 41.25%. Why was the increase applied to the rounded 2014 estimate, rather than the actual unrounded 2014 estimate?

Please be aware that we expect to have further questions regarding the filing as the review continues.

To ensure that the review of your filing has been completed before statutory deadlines, we expect you to respond as expeditiously as possible to every objection in our letter, but no later than July 1, 2014. Note that the responses can be submitted separately and do not have to be submitted all at the same time.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Sincerely,

Josh Hammerquist A.S.A., M.A.A.A.

Re: Blue Cross and Blue Shield of Vermont
2015 Exchange Filing
SERFF Tracking #: BCVT-129572217

Dear Jude Daye:

We have been retained by the Green Mountain Care Board ("GMCB") to review the above referenced group products filing submitted on 6/2/2014. The following additional information is required for this filing.

Questions:

1. General
 - a. Please provide the final 2014 URRT and describe if the PMPMs are directly comparable to the 2015 URRT. If any of the PMPMs are not comparable, please describe why and include a numerical example.
2. Changes to Initially Filed Rates in 2014
 - a. Please provide a breakdown of the changes that happened during the interrogatories with the actuaries or due to a decision made by the Board to the assumptions and rates that were initially filed in 2014.
3. Reason for Rate Increase
 - a. Please provide the percentage of the increase that is due to changes in the amounts providers are paid that are projected to occur before the end of 2014 beyond the original assumptions for 2014. In other words, please split the 2.9% increase from the top of page 5 of the Actuarial Memorandum into those that have already occurred and those that are projected to occur.

- b. Please reconcile the 4.8% increase in 2015 due to amounts providers are paid with the trend exhibits provided.
 - c. Please provide the calculation of the 2.5% decrease due to “new members” who have or will enroll in the qualified health plans who will be significantly healthier on average than those previously insured in individual and small group products.
 - d. Provide a more detailed quantitative breakdown of the other adjustments used in the 2014 rate development that cumulatively have the effect of reducing the required rate increase by 1.8%.
 - e. Provide quantitative and qualitative support for the 4.0% increase in rates that is attributed to the reduction in the transitional reinsurance program. How many member months were used to develop this estimate?
 - f. Provide quantitative and qualitative support for the 0.8% increase in rates that is attributed to benefit leveraging.
4. Changes in the Morbidity of the Population Insured
- a. Provide a comparison of the 2014 enrollment by age, gender and plan to the projected 2015 membership by age, gender and plan.
 - b. Describe the year to date paid claims and earned premiums that are available and discuss whether or not they should be considered in the rate development.
5. Changes in Benefits
- a. In Exhibit 5, should the change in the Benefit Adjustment factor ($1+c_1$) from the 2014 to 2015 filings be shown in the “Reason for Rate Increase” illustration? If so, please demonstrate the impact.
 - b. Describe the source of each of the benefits listed below in more detail. Is the data based on insured members? Were adjustments made to the data to fit the population that will be covered?
 - i. Pediatric Vision Benefit
 - ii. Pediatric Dental Benefit
6. Changes in Demographics
- a. In Exhibit 5, please explain the necessity of the Changes in demographics ($1+c_3$) after adjustments were made for Impact of the Health Status of the newly insured ($1+b_3$) and Changes in pool morbidity ($1+b_9$).
7. Other Adjustments
- a. From Exhibit 5, how much of the pharmacy rebates (e_1) in the experience period is estimated? How do the estimated experience period pharmacy rebates compare to the actual 2012 pharmacy rebates?
 - b. Provide quantitative support for the cost of the Vermont Vaccine Purchasing Program Payments for children and adults.
 - c. Please provide an exhibit with the information below for private reinsurance in 2011, 2012 and 2013.
 - i. Terms of private reinsurance
 - ii. Premiums PMPM
 - iii. Recoveries PMPM
 - iv. Number of claims
 - d. In Exhibit 5, provide the calculation of the net cost of reinsurance (e_5). Were any adjustments made to the claims data used in the BCBSVT Large Claims and Stop Loss Filing (BCVT-129374060)?

8. Contract Conversion Factor
 - a. From Exhibit 5, please discuss the appropriateness of reducing the projected index rate by the Changes in Family Tiering ($1+c_6$) and/or any guidance provided by CCIIO about this adjustment factor. Was any consideration given to making this adjustment in the 'cost-sharing design of the plan' to avoid reducing the allowed costs? Demonstrate compliance with the definition of the projected index rate in the Part I Instructions.
9. Projected Risk Adjustments PMPM:
 - a. Based on the support provided, the risk adjustment in cell V35 on WS 1 of the URRT should be $-\$0.08$. If this is correct, please update the URRT accordingly.
10. Benefit Richness Adjustment
 - a. Provide qualitative and quantitative support for the benefit richness adjustment factors for medical and pharmacy in Exhibit 6C.
 - b. Please discuss the changes in the benefit richness adjustments from the prior filing.
 - c. Were any steps taken to assure that the benefit richness adjustments did not include any differences in utilization due to differing health status of people with different cost-sharing designs, per page 26 of the Part I Instructions?
11. Impact of Specific Eligibility Categories for the Catastrophic Plan
 - a. Please elaborate on which adjustment for the catastrophic plan causes the method described on the bottom of page 24 in the Actuarial Memorandum to skew the Plan Adjusted Index Rate.
12. Taxes and Fees
 - a. Please provide the calculation of the Federal Insurer Fee of 2.83% of premium.
13. Administrative Expense Load
 - a. Please provide the total administrative costs and member months for the combined BCBSVT individual members, BCBSVT small group members and TVHP small group members for the prior 5 years.
 - b. Please provide a comparison of the 2014 and 2015 administrative expenses, and justify the differences.
14. Profit (or Contribution to Surplus) & Risk Margin
 - a. Provide quantitative support for the requested contribution to reserve.
15. Medical Trend Development
 - a. What is the projected change in utilization and unit cost for providers outside the service area?
16. Exhibit 6A
 - a. We note that several exhibits use the Plan Level Adjusted Index Rate as the average premium. Please discuss if the Plan Level Adjusted Index Rate is the expected premium or if it is 3.6% lower than the actual expected premium due to the Changes in Family Tiering adjustment discussed above.
17. Exhibit 6B
 - a. Please discuss the difference between the AV Metal Value and the Paid to Allowed Ratio for EHB Portion in Exhibit 6B for the plans listed below. Note that we are not suggesting that the AV Metal Values and the Paid to Allowed Ratios should reconcile. However, large discrepancies merit further review.
 - i. Standard Bronze CDHP
 - ii. Standard Silver CDHP

Please be aware that we expect to have further questions regarding the filing as the review continues.

To ensure that the review of your filing has been completed before statutory deadlines, we expect you to respond as expeditiously as possible to every objection in our letter, but no later than June 16, 2014 at noon EST. Note that the responses can be submitted separately and do not have to be submitted all at the same time.

We trust that you understand these forms may not be used in Vermont until they are formally approved by the GMCB.

Sincerely,

A handwritten signature in black ink that reads "Josh Hammerquist". The signature is written in a cursive, flowing style.

Anticipated Federal loss ratio standard in market

80%

Justification for relationship of Federal MLR standard and the projected future loss ratio including detailed break down of adjustments

Please see the Actuarial Memorandum and Exhibit 8 for details about the adjustments. Our projected Loss Ratio is much higher than the anticipated 80% Federal MLR Standard.

Note:

The historical time periods should represent calendar years since the inception date of the plan type through the most recent date available allowing for the appropriate amount of run-out. In instances where the start dates and end dates do not line up with a calendar year, partial years should be used. The interim time period the time between the end date of the "Most Recent Date Available" and the rate effective date. The future year should represent the 12 months immediately following the rate effective date.

1. GENERAL INFORMATION

1.1. Company Identifying Information

Company Legal Name: Blue Cross and Blue Shield of Vermont
State: Vermont
HIOS Issuer ID: 13627
Market: Combined
Effective Date: January 1, 2015

1.2. Company Contact Information

Primary Contact Name: Paul Schultz, FSA, MAAA
Primary Contact Telephone Number: 1-(802)-371-3763
Primary Contact Email Address: schultzp@bcbsvt.com

1.3. Scope and Purpose

The purpose of this rate filing is to provide the rates and a description of the rate development for the products that Blue Cross and Blue Shield of Vermont (BCBSVT) proposes to offer on Vermont Health Connect (VHC).

This filing is intended to comply with the following laws:

- Vermont State Law 8 V.S.A. § 4062
- Vermont State Law 8 V.S.A. § 4512
- Vermont State Law 33 V.S.A. § 1806
- Vermont State Law 33 V.S.A. § 1811
- Vermont State Law 33 V.S.A. § 1812.
- DFR Order establishing tier rate structure and multipliers (Docket No. 13-002-I)
- Vermont Department for Children and Families Health Benefits Eligibility and Enrollment Rule, Sections 2.04 and 13.00
- Federal Regulation 45 C.F.R. Part 153
- Federal Regulation 45 C.F.R. Part 154
- Federal Regulation 45 C.F.R. Part 155
- Federal Regulation 45 C.F.R. Part 156
- Federal Regulation 45 C.F.R. Part 158
- Federal Regulation 26 IRC § 223

1.4. Proposed Rate Increase(s)

BCBSVT proposes an average increase of 9.8 percent.

**BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM**

1.5. Reason for Rate Increase(s)

Significant medical price increases were partially offset by favorable membership assumptions and reductions in BCBSVT administrative expenses. Combined, these factors produced a 3.3 percent increase in rates. The remainder of the 9.8 percent increase was driven by changes related to federal and state health care reforms, including an increase in the federal fee that is included in Exchange pricing, a reduction in federal subsidies of the premiums on Vermont's Exchange, and a modest expansion of dental benefits for children.

- The federal government assesses a charge on all health plans to subsidize Exchange coverage for the three year-period between 2014 and 2016, through its Transitional Reinsurance Program. The subsidy is reduced in 2015 and 2016, before being eliminated entirely in 2017. Because the premium subsidy is being reduced from an estimated seven percent to an estimated three percent in 2015, it will require groups and members to pay 4.0 percent more for their coverage.
- The federal insurer fee established by the Affordable Care Act is used to provide subsidies to low-income people to help them afford to purchase Exchange products. This fee is increasing by more than 40 percent, resulting in a 0.9 percent increase in premium for Exchange products.
- The Green Mountain Care Board approved a change to enhance coverage for dental services for children. The change provides that children covered through the non-CDHP Exchange products will have access to cleanings and other services with no cost-sharing requirement. The enhancement in coverage raises the premium by 0.5 percent.
- Most deductibles, out-of-pocket maximums and co-pays in Exchange plans remain unchanged from 2014 to 2015. As overall costs increase and the amounts that members pay in cost-sharing contributions stays the same, more of the total cost is transferred to premiums. This had an impact of 0.8 percent on premium.

These four items drive an increase of 6.3 percent required solely because of mandated changes associated with the Affordable Care Act and Vermont benefit decisions.

In the absence of mandated changes associated with the Affordable Care Act and Vermont benefit decisions, a 3.3 percent increase would have been requested:

- An estimate of increases in the amounts providers are paid was included in 2014 Exchange rates. Increases beyond those assumptions that have already

BLUE CROSS BLUE SHIELD OF VERMONT

2015 VERMONT EXCHANGE PRODUCTS RATE FILING

ACTUARIAL MEMORANDUM

occurred in 2014, or that are projected to occur before the end of 2014, drive a premium increase of 2.9 percent. This primarily includes hospital payments under budgets approved by the Green Mountain Care Board and prescription drug prices.

- Amounts providers are paid are expected to increase by 4.8 percent in 2015. This increase flows directly to premium.
- BCBSVT assumes that “new members” who have or will enroll in our qualified health plans will prove to be significantly healthier on average than those previously insured in individual and small group products. This assumption creates a premium decrease of 2.5 percent.
- Other adjustments to the assumptions used in the 2014 rate development cumulatively have the effect of reducing the required rate increase by 1.8 percent. These include items such as updating the experience base to calendar year 2013 and observing the mix of membership actually enrolled on the Exchange in 2014. Notably, BCBSVT has:
 - Reduced the projected medical utilization “trend” (the expected increases in overall medical use) to zero,
 - Reduced its administrative expense fees, and
 - Included a one percent contribution to reserves, an amount that is lower than it would normally require for the protection of Exchange members.

2. PROPOSED BENEFITS

2.1. Description of Benefits

BCBSVT Standard Plans: BCBSVT is providing rates for the Standard Plans with benefits as approved by the Green Mountain Care Board, which are outlined in Exhibit IA - (State of Vermont Standard Plan Designs). The plans are on the EPO network and offer members access to a nationwide network of providers. These plans include coverage for all Essential Health Benefits (EHBs). The Form filings for these products can be found under BCVT-129432892 for Non-CDHP plans and BCVT-129433224 for CDHP Plans.

BCBSVT Blue Rewards (Non-Standard) Plans: BCBSVT is providing rates for two health and wellness-based non-standard plan types that we have named Blue Rewards and CDHP Blue Rewards. Please see Exhibit IB - (BCBSVT Blue Rewards (Non-Standard) Plan Designs) for details on the benefit structure. The Form filings for these products can be found under BCVT-129433009 for Non-CDHP plans and BCVT-129433137 for CDHP Plans. BCBSVT Blue Rewards plans also offer a Wellness program with incentives up to

**BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM**

\$300 per year for each adult member for completing a health assessment, having a physical exam, setting a personal health goal and having a routine eye or dental exam

2.2. AV Metal Values

BCBSVT will be offering two types (Standard and Non-Standard) of plans on Vermont Health Connect in 2015. Standard plans are designed by the State of Vermont and offered by all issuers on the Exchange. Please see Attachment A - Standard Plans AV Certification (Parts 1 and 2) for the certification provided by the State.

Non-Standard plans are designed by BCBSVT. The metal values included in the URRT were calculated using an alternate methodology, as allowed by 45 CFR §156.135. Multiple benefit designs offered in BCBSVT's Non-Standard plans are not supported by the AV Calculator.

Please see Attachment B - Blue Rewards (Non-Standard) Plans AV Certification, for the actuarial certification, which includes the process used to develop the AV Metal Values.

3. EXPERIENCE RATING

3.1. Experience Period Premium and Claims

The experience period used is composed of current members in Blue Cross and Blue Shield of Vermont (BCBSVT) Individual and Small Group products and The Vermont Health Plan (TVHP) Small Group products. TVHP is a fully owned subsidiary of BCBSVT. We combined both companies since all their members will be migrating to the Exchange and Small Group products are no longer offered under TVHP. This population will be the Single Risk Pool. Members with Medicare as their primary insurance or members without a pharmacy benefit were excluded.

We used claims incurred January 1, 2013 through December 31, 2013 and paid through March 31, 2014. Both the paid claims and the allowed charges were completed using BCBSVT's monthly reserving models that underlie the financial statement reserves (best estimates before margin). These methods are subject to review by independent auditors and examination by Vermont Department of Financial Regulation (DFR). The claims used to develop the completion factors include a larger block of business than the experience period block. For the purpose of calculating completion factors the reserving method categorizes claims by reporting/payment process (Local, BlueCard, Pharmacy, Medicare Supplement, etc.). Completion factors are calculated separately for each category. Using the larger block to calculate the Incurred But Not Reported (IBNR) claims reduces the variability of the projection.

BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM

The paid claims and allowed charges come directly from claim records in BCBSVT's data warehouse. For Fee-for-Service claims, we combined plan payment with member cost sharing to calculate the allowed charges. For claims under a capitation arrangement, we combined capitation paid to the provider with the member cost sharing to generate allowed charges.

The table below shows details underlying the Incurred Claims and Allowed Claims (from URRT, Section 1 of Worksheet 1) for the Experience Period.

Claims	Incurred Claims	Allowed Claims
Claims incurred and paid through December 31, 2013	\$267,341,514	\$329,118,227
Estimate of IBNR as of March 31, 2013	\$1,050,342	\$1,127,369
Total Claims	\$268,391,883	\$330,245,595
Member Months	729,421	729,421
Total PMPM	\$367.95	\$452.75

The experience period total allowed charges PMPM is \$452.75.

In the experience period, the earned premium was \$287,929,163. Neither BCBSVT nor TVHP is required to pay MLR rebates for the 2013 calendar year.

3.2. Benefit Categories

Medical claims are initially categorized into 2 categories based on the type of claim form the provider submitted: UB-04/CMS 1450 (Facility Inpatient/Outpatient) or HCFA/CMS 1500 (Professional/Other). Facility claims are then divided into the Inpatient and Outpatient categories in Worksheet 1, Section II by the place of service listed on the UB-04 claim form.

Professional and Other medical claims are subdivided based on whether the provider is a medical professional or medical supplier as submitted on the HCFA 1500 claim form.

The prescription drug benefit category was populated for claims processed through our pharmacy benefit manager.

The capitation benefit category was populated with claims that run through our internal capitation system. The capitation category uses "other" as a utilization description and the units represent the number of capitations in a given year.

**BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM**

3.3. Index Rate

The Index Rate is equal to the experience period allowed charges for EHB.

To calculate the Experience Period Index Rate (line A of Exhibit 5), we first excluded pharmacy rebates, Blue Card fees, and payments to the BluePrint program. These claims are not dependent on benefits and should not be subject to the projection factors described in the following sections. They will be added back into the Projected Index Rate (as described in section 3.4.5.).

BCBSVT has access to the detailed claims information underlying capitated claims and since the majority of the capitation arrangement will no longer be in place in the projection period, using the FFS equivalent represents the expected payment better than the capitation.

These adjustments are included in the “Other” factor in the section 2 of worksheet 1 of the URRT.

	Total Dollars	PMPM
Allowed Claims in section 1 of worksheet 1 of URRT	\$330,245,595	\$452.75
Remove Blue Card Fees	- \$1,308,412	-\$1.79
Remove Pharmacy Rebates	+ \$2,509,837	+\$3.44
Remove Payments to BluePrint Program	- \$1,522,003	-\$2.09
Remove Payments to the Vermont Vaccine Purchasing Program	- \$903,474	-\$1.24
Replace Capitation with FFS equivalent	- \$4,275,610	-\$5.86
Experience Period Index Rate Claims	\$324,745,934	\$445.21

The Experience Period Index Rate is \$445.21.

3.4. Projection Factors

3.4.1. Membership Projections

As of late April, BCBSVT had 55,045 members enrolled in a QHP product, either through Vermont Health Connect or directly. BCBSVT also had 3,145 Small Groups members with renewal dates of May 2014 and beyond. These groups are expected to sign up in QHP products upon renewal.

We used this information to project the 2015 Exchange enrollment and the distribution by plan. Small Groups that have yet to make the move to a QHP plan are expected to choose plans in proportion to other members from our Small Group lines of business. The total member months expected to be covered by this filing is 698,280.

BLUE CROSS BLUE SHIELD OF VERMONT 2015 VERMONT EXCHANGE PRODUCTS RATE FILING ACTUARIAL MEMORANDUM

This projected membership was also used to adjust our Index Rate for demographics, morbidity, benefit changes, and other allowable adjustments described below.

Details of the projected membership breakdown are on Exhibit 2A.

3.4.2. Changes in the Morbidity of the Population Insured

Our experience period is based on calendar year 2013. It includes members that enrolled in a QHP with BCBSVT during 2014, are expected to enroll in a QHP with BCBSVT upon the renewal date of their small group plan, or cancelled.

Based on these different categories, we split the experience claims cost and compared the different populations. We used the allowed charges from the experience and adjusted for the change in network (see section 3.4.5 for details on this adjustment). Using the average claims cost of the members expected to enroll with BCBSVT in 2015, we adjusted the experience period claims cost.

	"Cancelled" Members	Continuing Members	Total
Experience Period Allowed (adjusted for change in Network)	\$139,840,024	\$218,710,557	\$358,550,580
Member Months	257,381	472,040	729,421
PMPM	\$543.32	\$463.33	\$491.56

The factor $(1+b_9)$ on Exhibit 5) to adjust for the change in pool morbidity is $\$463.33/\$491.56 = 0.9426$.

We also adjusted the experience for the new entrants. As of late April, 15,689 members that were not previously enrolled with BCBSVT or TVHP had enrolled in one of our QHP Products. All that is known at this time are the members' age and gender. Using Milliman's Health Cost Guidelines (2013) age-gender factors (AGF), we compared the expected claims cost of our existing members to the expected claims cost of the new entrants.

Again, we started with the experience claims adjusted for the network and split the continuing members into the market they joined (Individual Non-Subsidized, Individual Subsidized and Small Group). We adjusted the PMPM of the new members within each market by the ratio of the resulting AGF for new and continuing members. The weighted average PMPM of new and continuing members was compared to the PMPM for existing members alone in order to derive the adjustment for new member morbidity.

See Exhibit 2B for details.

**BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM**

3.4.3. Changes in Benefits

We included two factors to account for the change in benefits. The first one, ($1+c_1$ line on Exhibit 5), represents the anticipated change in the average utilization of services due to the change in average cost sharing in QHP products compared to the experience period products. To calculate this factor, we first calculated the average modeled paid to allowed ratio for the benefits in the experience. The model used to re-adjudicate each benefit and assign an induced utilization factor is described in BCBSVT Benefit Relativity Values Filing (BCVT- 129370654).

Calculation of the Impact of the change in benefits ($1+c_1$)	
Experience Period Average Utilization Factor (for “old” products)	0.9633
Projected Period Average Utilization Factor (for QHP products)	0.9725
Benefit Adjustment ($1+c_1$) = $0.9725 / 0.9633$	1.0096

The second factor is for additional Essential Health Benefits that now have to be included. This includes Pediatric Vision and Pediatric Dental Benefits. These benefits are for members age 21 and younger. Neither of these benefits was in our experience. We therefore used claims estimates provided by outside vendors.

For the Pediatric Vision benefit, the expected allowed claims cost per child, as calculated by our vision vendor, VSP, is \$3.10 per month. This translates to \$0.58 per member per month based on the experience period split between adult and child. This cost is included in the buildup of the Projected Index Rate (Exhibit 5, line e₆). We assumed that the paid benefits would not be materially different from the allowed charges.

For the Pediatric Dental benefit, Milliman performed the calculation of the expected claims cost for each benefit. The overall expected allowed charges per child are \$42.49 per month, which becomes \$7.99 per member per month. This cost is included in the built up of the Projected Index rate (Exhibit 5, line e₇). Attachment C details Milliman’s method to calculate the expected paid claims for each proposed plan.

3.4.4. Changes in Demographics

To develop the change in demographic factor (factor $1+c_3$ on Exhibit 5), we again used Milliman’s Health Cost Guidelines (2013) age-gender factors. We applied these factors to both the experience membership for continuing members and the projected membership and compared the average factors.

**BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM**

Calculation of the Demographic Adjustment ($1+c_3$)	
Experience Period Average Age-Sex Factor	1.22250
Projected Period Average Age-Sex Factor	1.21986
Demographic Adjustment ($1+c_3$) = $1.21986 / 1.22250$	0.9978

3.4.5. Other Adjustments

The buildup of the Projected Index Rate also includes a factor for the change in provider networks and adjustments for non-system claims¹.

We adjusted our experience period for the change in provider networks (factor $1+c_2$ on Exhibit 5). BCBSVT's 2015 Exchange plans are offered on our EPO Network. This is a new network, as of January 1, 2014. Our experience period claims came from four different networks, BCBSVT's Non-Managed network (PPO/Indemnity), BCBSVT's Managed network (VHP), BCBSVT's Catamount network and TVHP's network. All four of these networks have different contracts with different reimbursement schedules. Using the historical contracted reimbursement schedules, we calculated network factors that represent the different contracts. Using these factors, we can adjust our projected allowed changes to represent the contract that will be effective in 2015. This factor also includes Pharmacy reimbursement changes between the experience period and the projection period. In the experience, pharmacy claims were subject to two discount schedules. In the projection period, all Exchange pharmacy claims will process on one discount schedule. See details on Exhibit 2C.

Other costs were added in the buildup of the Projected Index Rate to account for non-system claims (Items e_1 - e_5 on Exhibit 5). As previously explained in section 3.3, these non-system claims are claims that are independent from the benefits.

- Pharmacy Rebates (e_1):
The experience period pharmacy rebates is estimated to be \$3.44 PMPM. This number is estimated since we have not yet received the details underlying the rebate payment for the later part of CY 2013. Pharmacy rebates are expected to trend at the same rate as Brand Drugs. As shown on Exhibit 3E, the projected trend for Brand drugs is 8.0 percent, which brings our projected pharmacy rebates to \$4.01 PMPM.
- BluePrint Payments (e_2):
BCBSVT participates in the Vermont BluePrint for Health² program. The experience period payments for this program were \$2.09 PMPM. We do not expect this PMPM to change in 2015.

¹ Non-system claims are payments that are not processed through the claims adjudication system.

² <http://hcr.vermont.gov/blueprint>

BLUE CROSS BLUE SHIELD OF VERMONT

2015 VERMONT EXCHANGE PRODUCTS RATE FILING

ACTUARIAL MEMORANDUM

- Interplan Teleprocessing System (ITS) (e₃):
The BlueCard® Program gives BCBSVT members healthcare coverage wherever they go across the country and around the world. The fees associated with this program are independent of the amount of the claims and therefore solely dependent on utilization of BlueCard participating providers. As described below, we believe that the medical utilization trend is flat and therefore these fees are expected to remain at the \$1.79 PMPM experienced in 2013 throughout 2015.
- Vermont Vaccine Purchasing Program Payments (e₄):
The Vermont Vaccine Purchasing Program³ offers health care providers state-supplied vaccines at no charge by collecting payments from Health plans, insurers and other payers. This is based on the actual claims from Vermont providers where the vaccine is indicated as having been supplied by the state. Based on the individual vaccine cost rates provided by the program and the charges assessed by the program we estimate an imputed charge for each claim where the vaccine is provided by the state. The average PMPM (\$1.24) for the experience period was used as the expected cost for the projection period.
- Net Cost of Reinsurance (e₅): BCBSVT uses reinsurance to protect itself against very high claims. Included in the Projected Index Rate is the net cost (reinsurance premium less expected reinsurance claims) of reinsurance. This PMPM cost was calculated in BCBSVT Large Claims and Stop Loss Filing (BCVT-129374060).

3.4.6. Contract Conversion Factor

Vermont has defined the following tier structure:

Tier	Definition	Tier Ratio
Tier One	Single	1.00
Tier Two	Couple	2.00
Tier Three	Single Head of Household with one or more children	1.93
Tier Four	Family : Two Parents with one or more children	2.81

These mandated tier factors do not represent the expected relationships between tiers. An adjustment is necessary so that the premium produced using the state tier factors matches the premium required for the plan based on the BCBSVT tier factors which reflect the plan benefits.

³ <http://healthvermont.info/hc/imm/VaccinePurchasingPoolPilotProgram.aspx>

BLUE CROSS BLUE SHIELD OF VERMONT 2015 VERMONT EXCHANGE PRODUCTS RATE FILING ACTUARIAL MEMORANDUM

Based on the experience period claims, trended to 2015 and adjusted for the changes in network, we created a model to calculate the expected payments for benefits where more than one member accumulates to a combined out-of-pocket. Using the same base, we calculated and convolved expected claims payments for children, adults, and combinations of both.

For all benefits, tiers three and four were modeled with each of one through five children. We also modeled seven children as a proxy for six or more children. The expected claims cost were then weighted based on the distribution of children in those tiers in our experience period. For aggregate benefits, we also modeled two adults.

Using our projected membership and contracts by tier, we calculated an average tier factor of 1.5011 and the average members per subscriber at 1.6881.

Since the Tier factors are different from the expected claims cost, we adjusted our projected PMPM to account for this difference. The adjustment is shown on line 1+c₆ of Exhibit 5. The details are on Exhibit 2D.

3.4.7. Trend Factors (cost/utilization):

Pharmacy Trend Development

The source of the data is BCBSVT's data warehouse, except where noted below. To ensure accuracy of claims information, the data used has been reconciled against internal reserving, enrollment and other financial reports. We combined the pharmacy experience of BCBSVT and TVHP small groups and individual products to develop the pharmacy trend. We used claims incurred from October 1, 2011 to September 30, 2013, with payments through March 31, 2014. Note that the fourth quarter of 2013 was excluded from the analysis due to a significant increase in utilization leading up to the implementation of Vermont Health Connect. We believe that this was a one-time phenomenon, and not the beginning of a pattern of higher utilization. Drug card and HSA drug experience is combined, and completion factors, based on the total drug card and HSA pharmacy experience for both companies, were applied to estimate the ultimate incurred claims. Allowed charges are used rather than claim payments, in order to mitigate the effect of benefit changes on observed trends. The data includes claims from the single risk pool.

ESI has been the pharmacy benefits manager for BCBSVT and TVHP since July 2009. The initial ESI contract was for a period of 3 years; a new contract became effective July 2012. We have adjusted the historical pharmacy claims data, as well as the projected pharmacy claims, to normalize for the various guarantees within these contracts. Specifically, all historical experience has been restated to the provisions for the contract year ending in 2014. The initial selections of brand and generic cost

BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM

trends based on historical analysis are then reduced by a factor equal to the contracted future improvement in pricing guarantees.

With the emergence of new and expensive specialty drugs, as well as the increasing shift to generics as more brand drugs come off patent, we analyzed the components of trend (cost and utilization) separately for Brands, Generics, and Specialty drugs. We have projected the generic dispensing rate (GDR) based on the brand drugs that are scheduled to lose patent in the next few years. Specialty drugs are very high cost drugs with low utilization. Because of their relative infrequency, it is more appropriate to look at the overall PMPM trends for these drugs rather than separate cost and utilization components. The overall pharmacy trend is then calculated by combining the separate projections.

Exhibit 3A provides the monthly and the 12-month rolling data, along with the corresponding year-over-year and exponential regression trends, for non-specialty drugs. These are shown separately for the generic cost, brand cost, and overall non-specialty utilization categories. The number of days supply, rather than the number of scripts, is used to normalize for changes in the days supply per script (e.g. increased use of 90-day fills). Because there are several popular brand drugs that have become generic during the experience period, or will become generic during the projection period, we have combined the data for generic and brand drugs for the purpose of analyzing utilization patterns (the separate GDR projection is applied to the total projected utilization to arrive at brand and generic components). The regressions use 24 data points on the monthly data, in order to best capture an adequate amount of the most recent history of drug costs.

Exhibit 3B provides the historical generic dispensing rates (GDR). The period from January 2011 to December 2012 experienced a 4.4 percent increase in GDR. This is primarily due to blockbuster drugs such as Lipitor, Seroquel, Plavix and Lexapro losing their patents. (Note that we make an assumption as to changes in GDR due to plan design elsewhere in the development; therefore, it would be inappropriate to include it here.) Although several popular drugs, such as Nexium and Lunesta, are expected to lose their patents in the upcoming year, our drug-by-drug analysis shows that GDR will not increase at the same historical rate. Based on our current distribution of days supply and a list of brands expected to move to generic in the period during which these trend rates will be in effect, as provided by ESI, we estimate that GDR will reach 86.6 percent in the projected period.

It is important to note that care must be taken in projecting the GDR to avoid the simplifying assumption that generic shift will continue at historical levels. Generic conversion is a very discrete function - while specific dates for generic launches may be impacted by ongoing litigation, the list of brand drugs losing their patent protection is well-recognized in the industry. Furthermore, generic substitution protocols have increased generic substitution rates to well over 99 percent where

BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM

such switches are clinically viable. For the above reasons, it would be actuarially inappropriate to base a future GDR assumption on a linear projection of past increases, which is why we have chosen to take a far more detailed, and more discrete, approach. Exhibit 3C lists the brand drugs that are expected to lose their patent protection through the end of the projection period and their prevalence in our experience.

Exhibit 3D shows the calculation of the 86.6 percent GDR in the projection period. Utilization for brand drugs losing or expected to lose their patent protection from calendar year 2013 through the projection period is summarized by month. Because Average Wholesale Price (AWP) and effective discounts do not change significantly for most new generic drugs until the six-month exclusivity period has closed (that is, when the generic becomes “multi-source”), average 2013 utilization is projected through six months following each generic launch date. After that time, all utilization is expected to shift to generic.

Exhibit 3E summarizes the trends for non-specialty drugs and calculates our total non-specialty allowed drug trend as 7.1 percent.

Exhibit 3F provides the monthly and the 12-month rolling data, along with the corresponding year-over-year trend and exponential regression trends, for Specialty drugs. These regression criteria were chosen in order to best capture the most recent history of drug costs. Rolling 12-months regression is more appropriate for Specialty Drugs because of the low-frequency, high-cost nature of these drugs. We made a further adjustment to specialty trends to reflect the expected May 2014 launch of generic Copaxone. This drug accounts for nearly 10 percent of allowed specialty cost during the experience period. We assumed that generic Copaxone would be priced 10 percent below the price of Copaxone during the six-month exclusivity period and 30 percent below the price of Copaxone thereafter. This results in a 2 percent dampening of expected specialty trend. We used a relatively short period of rolling PMPMs due to the rapidly emerging nature of the specialty drug market.

Using the PMPM claims as weights between Non-Specialty and Specialty claims for the 12 months ending December 2013, adjusted to the contract in place as of December 2013, we calculate the following:

Category	PMPM	Overall Trend
Generic	\$21.94	5.6%
Brand	\$33.30	8.0%
Specialty	\$20.67	11.8%
Total	\$75.91	8.4%

BLUE CROSS BLUE SHIELD OF VERMONT 2015 VERMONT EXCHANGE PRODUCTS RATE FILING ACTUARIAL MEMORANDUM

Medical Trend Development

The source of the data is BCBSVT's data warehouse, except where noted below. To ensure accuracy of claims information, the data used has been reconciled against internal reserving, enrollment, and other financial reports. Claims incurred between January 1, 2010 and December 31, 2013, completed through March 31, 2014, were used in the analysis. Completion factors are applied to estimate the ultimate incurred claims for each period shown in the exhibits. The regressions for medical trend used claims incurred through December 31, 2013.

The data includes claims from the single risk pool.

Using the historical contracted reimbursement schedules, we calculated network factors that represent the different contracts. Using these factors, we can modify the claims to reflect only one contract. From there, we can observe the historical cost increases using all claims information for the single risk pool.

Medical Trend is composed of three pieces: cost, utilization and intensity. In our analysis, we combine utilization and intensity within the utilization metric and analyze the unit cost separately. Historical experience is normalized for contract changes and then analyzed to derive a utilization trend in the absence of unit cost changes. Future unit cost trends are developed on a discrete basis, using the most recent round of contract negotiations as a starting point. The overall trend is the product of these two components.

Utilization

Contract changes for the entirety of the experience period were measured explicitly for each facility within our service area, as well as the three largest physician groups.

Increases were measured for fee schedules and other chargemasters by applying each schedule to a market basket of services. The market basket was defined by using Current Procedural Terminology (CPT) codes & CPT modifier combinations that were present in each of the effective periods the schedules covered. Using the same experience period data used throughout the trend analysis, total allowed costs for the selected CPT & CPT modifier combinations were compared under each schedule to estimate the percentage increase. For contracts under DRG arrangements, we compared the charge for the 1.000 DRG service for each period. Finally, for services under a discount of charge arrangement, we used the contracted chargemaster increase provided by our Provider Contracting department.

This accounted for over 90 percent of allowed claims dollars during the experience period. Costs for other claims are primarily for out-of-area services. Contracting changes for these claims were derived from the Fall 2013 Blue Trend Survey, which is a proprietary and confidential dissemination of the BlueCross BlueShield Association.

BLUE CROSS BLUE SHIELD OF VERMONT

2015 VERMONT EXCHANGE PRODUCTS RATE FILING

ACTUARIAL MEMORANDUM

Claims were normalized to the December 2013 contract at each unique provider by applying a factor equal to the product of the impact of each contracting change from the experience month through December 2013. The derived trend for other claims was assumed to be continuous. Please see Exhibit 3G for an illustration of this approach.

Shown on Exhibit 3H is the resulting array of allowed PMPM claims costs, before and after normalization for contract changes. We performed regressions on a number of periods, including 24 and 36 months of monthly PMPM costs, both including and excluding the fourth quarter of 2013. Results can also be seen on Exhibit 3H. Results vary from -3.1 percent (most recent 24 months through September 2013) to +3.3 percent (most recent 24 months through December 2013). Using the longer 36-month time period produces results that are closer to zero.

Using regressions on a longer period will help reduce the effect of high claims, as well as short-term oscillations due to the low-frequency, high-intensity nature of the services. We believe that the best estimate is produced by using the 36-month period ended December 2013. While there may have been a “rush to services” in advance of moving to Vermont Health Connect, this effect would be more profound on prescription drugs where claims are more frequent and the timing of which is more subject to manipulation. We believe that this impact is overshadowed by the effect of the clear seasonal pattern of lower medical claims in Q3 and higher medical claims in Q4. (Using a period beginning in Q4 and ending in Q3 will artificially skew trends downward.) For these reasons, we have treated the 36-month result through December 2013 of 0.7 percent as our most credible data point. However, because of the potential increased utilization in Q4, we have chosen a flat utilization trend assumption of 0.0 percent.

As a check and for further information, we also performed our analysis in the same way we calculated utilization trend in our most recent large group trend filing (see BCVT-129403752, which was approved without amendment by the GMCB). It is important to note that this methodology includes intensity as a component of the unit cost trend, rather than the utilization trend. Nonetheless, results tracked very closely to those produced by the technique described above. This indicates that intensity has been essentially flat over the length of the experience period. Results can be seen in Exhibit 3I.

The alternate methodology addresses trend by provider type. Inpatient utilization is observed by modeling the number of admissions per thousand members per month. Since inpatient admissions are very volatile, using a long range regression will reduce the impact of this volatility. The three year regression on monthly admissions is 2.1 percent increase on Inpatient Utilization. While there is a national trend toward fewer inpatient admissions, that does not appear to be the case in Vermont. We

BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM

conjecture that the rural nature of the state and relative unavailability of alternative outpatient services may be leading to an absence of declining inpatient trends in the state.

Outpatient utilization is observed by modeling the number of services per thousand members per month. The three year regression on monthly visits yields a zero percent trend in Outpatient utilization. This result seems more intuitive when observed in conjunction with the positive trend in inpatient admissions, and appears to represent a subtle shift from outpatient to inpatient services.

“Professional and Other” claims include all claims that are on a HCFA form, such as professional visits, DME, Ancillary, Labs, etc. Professional utilization is observed by modeling the number of visits per thousand members per month. The number of professional visits has been very stable over the past three years. The three year regression on monthly claims results in a 0.4 percent professional utilization trend.

Each of the above results is calculated on a 36-month regression of monthly data through December 2013. The overall utilization trend for this period is 0.6 percent. Using a period ended September 2013 yields a negative trend of -1.5 percent. Both of these results are very close to those produced for these time periods, using our preferred methodology.

Category	YE Dec 2013 PMPM	Regression Results using 36 month - Excluding Q4 2013	Regression Results using 36 month - Including Q4 2013
Inpatient	\$90.99	-0.1%	2.1%
Outpatient	\$188.87	-2.0%	0.0%
Professional and Other	\$134.88	-1.8%	0.4%
Total	\$414.74	-1.5%	0.6%

Again, we feel that the period ended December 2013 represents the best point estimate. But in order to mitigate the impact of a potential rush to services in the final quarter of 2013 and to better represent our longer-term outlook on the use of services, we have chosen zero percent as our utilization trend.

Unit Cost

Unit cost trends were largely derived from observations of recent contracting and provider budgetary changes.

**BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM**

During calendar 2013, roughly 55 percent of total claims dollars were provided by Vermont facilities and providers impacted by the hospital budget review process of the Green Mountain Care Board (GMCB). We have assumed that the GMCB would approve hospital budgets for October 1, 2014 and October 1, 2015 that support identical commercial increases as that approved for October 1, 2013. Based upon that assumption, Provider Contracting and Actuarial worked together to assess the impact such an increase would have on contract negotiations specific to the EPO network used for Qualified Health Plans.

It should be noted that the State legislature recently proposed a compromise 1.6 percent increase for Medicaid rates within their budget proposal. This would increase the cost shift toward commercial coverage, as the GMCB has established an overall system net patient revenue cap of 3.0 percent over 2014 budgets, which matches both last year's patient revenue cap and the fiscal 2014 increase in Medicaid rates. We have chosen not to further increase our trends for the potential upward impact this proposed greater cost shift would have on commercial rates.

Similarly, we assumed for other providers within the BCBSVT service area that overall 2014 and 2015 budget increases would be identical to those implemented during calendar 2013. Again, Provider Contracting and Actuarial worked together to assess the impact these increases would have on contract negotiations specific to the EPO network used for Qualified Health Plans.

Finally, unit cost increases for providers outside the BCBSVT service area were derived from the Fall 2013 Blue Trend Survey, which is a proprietary and confidential dissemination of the BlueCross BlueShield Association.

The results of the analysis are summarized in the below chart:

Annual Reimbursement Changes due to Budget Increases and Contracting Season

	Percent of Total Allowed Claims	FY 2014 Unit Cost Increases	Assumption to 2015
Vermont facilities and providers impacted by GMCB's Hospital Budget Review	55.6%	4.7%	5.7%
Other facilities and providers	44.4%	2.4%	3.4%
Total	100.0%	3.7%	4.7%

As a check and for further information, we also performed our analysis in the same way we calculated cost trend in our most recent large group trend filing (see BCVT-

BLUE CROSS BLUE SHIELD OF VERMONT 2015 VERMONT EXCHANGE PRODUCTS RATE FILING ACTUARIAL MEMORANDUM

129403752, which was approved without amendment by the GMCB). It is important to note that this methodology includes intensity as a component of the unit cost trend, rather than the utilization trend. Nonetheless, results tracked very closely to those produced by the technique described above. This indicates that intensity has been essentially flat over the length of the experience period. Results can be seen in Exhibit 3J.

For inpatient claims, we assessed the cost per admission and the cost per day. The monthly costs per admission and per day are very dependent on the type of inpatient claim. Using regressions on a longer period will help reduce the effect of high claims, as well as short-term oscillations due to the low-frequency, high-intensity nature of the services. The 36-month regression on monthly admissions results in an Inpatient cost increase of 7.8 percent to 8.0 percent. For outpatient claims, we looked at the cost per service. The 36-month regression on monthly claims yields an Outpatient cost increase of 7.2 percent to 7.5 percent.

We examined the cost per visit for Professional and Other claims, with a visit being defined as a unique combination of member, date, and provider. The majority of these services are on fee schedules, and BCBSVT has been able to control cost efficiently. The 36-month regression on monthly claims results in a 3.8 percent to 4.1 percent increase on Professional cost.

Overall Medical Trend

As a final check for reasonability, we performed a 36-month regression on monthly PMPM figures during the experience period described above. This analysis, which is shown in Exhibit 3K, yields a 4.5 percent trend estimate on claims through September 2013 and a higher estimate of 7.0 percent for the period ended December 2013.

We believe that the more discrete view of unit cost changes, as introduced on page 17, yields the more accurate analysis, and we believe a result that is toward the lower end of the range given by the 36-month regression analysis is entirely reasonable. Our selected trend assumptions are 0.0 percent for utilization (including intensity) and 4.4 percent for unit cost increases, resulting in an overall medical trend assumption of 4.4 percent. This overall medical trend rate is comfortably within the bottom quartile of medical trends reported in the Oliver Wyman Carrier Trend Report, January 2014 Analysis.

Overall Total Trend

To adjust the Experience Period Index Rate for the trend factors described above, we started with the experience period claims, adjusted for changes in network and applied cost and utilization to both Medical and Pharmacy claims. The resulting factors ($1+d_1$ and $1+d_2$ on Exhibit 5) are calculated on Exhibit 3L.

**BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM**

3.5. Credibility of Experience

BCBSVT's experience period had 729,421 member months and is therefore fully credible.

3.6. Credibility manual rate development

Since BCBSVT's experience is fully credible, no manual rate was needed in the development of rates for the experience period EHB. For additional EHB that BCBSVT does not currently have in its experience, the projected claims were based on manual rates produced by consultants. See Attachment C for details.

3.6.1. Source and Appropriateness of Experience Data Used: Not Applicable

3.6.2. Adjustments Made to the Data: Not Applicable

3.6.3. Inclusion of Capitation Payments: Not Applicable

3.7. Market Adjusted Index Rate

The Market Adjusted Index Rate (line H of Exhibit 5) is \$493.19. This is calculated by adjusting the Projected Index Rate (line F of Exhibit 5, \$503.40) for allowable market-wide modifiers described below.

3.7.1. Projected Risk Adjustments PMPM:

BCBSVT does not expect any risk adjustment transfer for 2015. BCBSVT covers at least 90 percent of the members enrolled in QHP products⁴ and therefore would closely track with the average risk of the market. We also have no information or experience on which to base an estimate of a risk adjustment amount.

As described in the Final Notice of Benefits and Payment Parameters rule (79 F.R. 13743), the per capita risk adjustment user fee, used to fund the HHS-risk adjustment program, is \$0.96 per enrollee per year, or \$0.08 per month (line g₁ of Exhibit 5)

3.7.2. Projected ACA Reinsurance Recoveries Net of Reinsurance Premium

To estimate the expected recoveries from the transitional reinsurance, BCBSVT adjusted its CY 2013 experience period by the network and trend factors $(1+c_2, 1+d_1,$

⁴ This was calculated by comparing our enrollment as of April 30, 2014 to the VHC Enrollment Update dated April 30, 2014.

http://info.healthconnect.vermont.gov/sites/hcexchange/files/Vermont%20Health%20Connect%20Enrollment%20Update_4.30.14.pdf

BLUE CROSS BLUE SHIELD OF VERMONT 2015 VERMONT EXCHANGE PRODUCTS RATE FILING ACTUARIAL MEMORANDUM

1+d₂ of Exhibit 5) and then re-adjudicated claims for each of the proposed benefits to model the expected claims that would be included in the Transitional Reinsurance Program.

The Final Notice of Benefits and Payment Parameters rule (79 F.R. 13743) defined the 2015 Transitional Reinsurance Program parameters as:

- \$70,000 claims attachment point
- 50 percent coinsurance
- \$250,000 reinsurance cap

Using these parameters, BCBSVT estimated the expected recoveries for each plan design offered on the Exchange. The expected recoveries were then weighted based on projected membership by plan. The recoveries only apply to members in the individual market. The projected recoveries must therefore be spread across all members, as Vermont has a combined market. The expected recoveries PMPM are \$13.96. See Exhibit 4 for details.

The Final Notice of Benefits and Payment Parameters rule (79 F.R. 13743) also established the Uniform Reinsurance Contribution rate at \$44 annually per capita, or \$3.67 PMPM.

The market-wide adjustment for the Transitional reinsurance program is therefore - \$10.29 (-\$13.96+\$3.67), as shown on line g₂ of Exhibit 5.

3.7.3. Exchange User Fees

BCBSVT does not expect Vermont Health Connect to charge a user fee for 2015.

3.8. Plan Adjusted Index Rates

3.8.1. Plan Adjustment - Actuarial Value and Cost Sharing adjustment

This plan adjustment, as shown on Exhibit 6A, is reflected by three factors:

- Paid to Allowed Ratio
- Benefit Richness Adjustment
- Changes in Family Tiers

3.8.1.1. Paid to Allowed Ratio

The Paid to Allowed ratios were calculated by first, calculating the paid to allowed ratio for projected EHB claims for services that were present in the experience period. This was done by taking the same starting point described in section 3.7.2 and re-adjudicating every plan. We then added the additional EHB paid and allowed, and

**BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM**

the non-system claims and market-wide adjustment amounts in both paid and allowed. We then calculated the overall expected paid to allowed ratio. Please see details in Exhibit 6B.

The Paid to Allowed Average Factor is the weighted average Expected Claims Cost without Market Wide Adjustments (\$393.77+\$5.73+\$2.18) divided by Projected Index Rate (\$503.40). As shown in Section 3 of Worksheet 1 of the URRT, the paid to allowed average factor is 79.8 percent.

3.8.1.2. Benefit Richness Adjustment

The Benefit Richness Adjustment is the counterpart of the Change in Benefit projection factor (1+c₁ line on Exhibit 5) described in Section 3.4.3. This factor represents the different projected utilization for each plan based solely on benefit design. These factors were normalized using the projected membership to ensure that the total adjustment was 1.000. See Exhibit 6C for details.

3.8.1.3. Change in Family Tier

The Change in Family Tier Adjustment is the counterpart of the Contract Conversion Factor (line 1+c₆ on Exhibit 5) described in Section 3.4.6. This factor represents the adjustment by plan needed to ensure that the premium produced using the state tier factors matches the premium required for the plan based on the BCBSVT tier factors which reflect the plan benefits. These factors were normalized using the projected membership to ensure that the total adjustment was 1.000. See Exhibit 6D for details.

**3.8.2. Provider Network, Delivery System and Utilization Management adjustment:
Not Applicable**

3.8.3. Adjustment for benefits in addition to the EHBs: Not Applicable

3.8.4. Impact of specific eligibility categories for the catastrophic plan

This plan adjustment includes two components of the impact of the specific eligibility categories for the catastrophic plan. Both of these adjustments are based on the eligible population. The eligible population includes Vermont residents that are under age 30 and residents age 30 and over who would find the lowest cost plan to be more than 8 percent of their income. This analysis on the eligible population was conducted by Neela Associates for our 2014 Exchange filing. Since the census data used for this analysis was not updated, BCBSVT will use the same population distribution as in its 2014 Exchange Filing.

Below is a summary of the analysis performed by Neela Associates:

BLUE CROSS BLUE SHIELD OF VERMONT

2015 VERMONT EXCHANGE PRODUCTS RATE FILING

ACTUARIAL MEMORANDUM

The under 30 population was identified by applying census data that shows that 36.7 percent of Vermont's population is between 0 and 30. We applied this percentage to eligible populations to arrive at the number of individuals under age 30 in each population. Eligible populations included currently non-subsidized Catamount members, individuals dropped from their employer plans (either community pool, association pool or large business pools), the currently uninsured who would not be eligible for a subsidy, and those currently in groups of one.

We also assumed that those individuals insured via group plans would stay with their group plans unless the groups were to drop coverage.

The second population is individuals for whom the lowest cost plan would be more than 8 percent of their income. To estimate this group, we started with Vermont census data by income and bronze plan costs. Using the 8 percent of income data, we grossed up the bronze plan costs and interpolated the census data to identify the percentage of individuals falling between 400 percent of FPL and the 8 percent of income threshold. We then applied this percentage to the following populations: non-subsidy eligible catamount members over the age of 30; individuals dropped from group plans over the age of 30; non-subsidy eligible uninsured individuals over the age of 30; and, groups of one over the age of 30. We did not include any members of VHAP, ESIA, subsidized Catamount members, or group insured members in the analysis unless the group was to drop coverage.

The number of eligible individuals age 30 and above is dependent on the cost of the lowest bronze plan. BCBSVT assumed that this would be its Non-Standard Bronze plan. At a single premium of \$357.52, the estimated number of individuals age 30 and above for whom this represents more than 8 percent of income is 1,736. We also estimate that the population under age 30 is 6,125, for a total of 7,861 individuals eligible for the Catastrophic Plan.

To adjust for the eligible population, we first calculated the adjustment for the impact on the pricing actuarial value of the expected lower allowed charges of the group eligible to enroll in the catastrophic plan. This was calculated by splitting the experience used to calculate the Pricing Actuarial Value into two populations (Under and Over 30) and re-adjudicating for the catastrophic benefit. Using the projected eligible members as weights, we calculated that the overall expected allowed charges are 0.6581 of the total allowed charges.

We then adjusted the paid to allowed ratio, based on the weighted average paid to allowed ratio from both populations. This factor is 0.9137.

Finally, we noticed that the normalization and order of operation required by the plan level adjustments described above were skewing the expected Plan Adjusted Index Rate for the catastrophic plan. To check our calculations, we calculated the plan

**BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM**

level adjustment two ways. First, by applying paid to allowed ratio, benefit richness factors and tier adjustment to only claims that they applied to, and then adding non-system claims and market-wide adjustments. Second, we calculated the Plan Adjusted Index Rate by applying the normalized paid to allowed ratio, benefit richness factor and tier factors to the Market Adjusted Index Rate. For all plans, except the catastrophic, this resulted in the same expected claims cost. We added an adjustment to the catastrophic plan to account for this difference. This adjustment is 0.9846.

The total adjustment for the specific eligibility categories for the catastrophic plan is 0.5920. See Exhibit 6E for details.

3.8.5. Adjustment for distribution of the administrative costs

3.8.5.1. Administrative Expense Load:

BCBSVT Administrative Expense load was not initially calculated as a percent of premium adjustment. This adjustment is the sum of the following fees:

- **BCBSVT Base Administrative Charges**
To develop the Base Administrative Expenses PMPM, we used the data underlying the Q4 2014-Q3 2015 BCBSVT Administrative Charges and Contribution to Reserves filing (BCVT-129486744). The experience period used in this filing is calendar year 2013.

We combined the expenses for the members expected to be in the Exchange in 2015. These members are from BCBSVT Small Group, BCBSVT Nongroup, BCBSVT Safety Net, BCBSVT Catamount and TVHP Small Group. The experience period PMPM is \$29.37.

While the specific functions differ in some respects, the cost of the administrative functions associated with the Exchange in 2015 is expected to be comparable to the cost of administering coverage for the eligible populations in 2013.

We have not trended costs forward from 2013 to 2015, as we expect increases in membership across our book of business to provide a broader base over which to spread fixed costs, offsetting any increase in underlying cost due to expected inflation and wage increases.

BCBSVT experienced one-time expenses in 2013 with the startup of VHC and the associated member outreach campaign. We do not believe that these will be recurring expenses and we removed them from the projected period expenses. The projected period PMPM is \$25.78.

- **Charges for Outside Vendors**
 - Vermont Collaborative Care

BLUE CROSS BLUE SHIELD OF VERMONT 2015 VERMONT EXCHANGE PRODUCTS RATE FILING ACTUARIAL MEMORANDUM

This is the amount PMPM to be paid to VCC for utilization review and management of mental health and substance abuse claims.

- CBA Dental and VSP Vision

These benefits are being administered by third party administrators. The administrative fees are charged for eligible members only. The ratio of eligible members to total members, based on the projected exchange population split between adult and child, was applied to get the per member per month charge.

- Health Equity

All Exchange members are eligible for HRA and/or HSA Integration service. For plans with an HSA-compatible benefit design, we offer a service to integrate with the mechanics of depositing monies into Health Savings Accounts (HSA). All plans are also eligible for this service with Health Reimbursement Accounts (HRA). To calculate these fees, we used the experience of members that are already enrolled in this program and compared it to all members enrolled in a QHP plan in the first quarter of 2014.

- Blue for You Program

Under this program, BCBSVT will reward members with credits via a debit card for the following wellness activities:

- Completing an online health assessment
- Setting personal health goals online
- Having a physical exam
- Having a routine eye or dental exam

We believe that this program will contribute to improvement in the health of Exchange members over time. In support of our mission of commitment to the health of Vermonters, BCBSVT management has decided to not make an explicit charge for this program in the Exchange plan rates.

The total of these charges adds up to 6.13 percent of premium. The details of the administrative charges are on Exhibit 7A.

3.8.5.2. Profit (or Contribution to Surplus) & Risk Margin:

The filed rates include a one percent contribution to reserves. BCBSVT included one percent for contribution to reserves because it is the minimum required to avoid depleting Risk Based Capital (RBC). Investment income is taken into account in the calculation of the minimum required contribution to reserve (CTR). This calculation does not consider the potential impact of exceptional one-time events (e.g. a flu epidemic). In normal circumstances, CTR would include some additional margin to protect member reserves against the occurrence of such an event. Because of the already-significant rate increase in this newly-established market, BCBSVT has

BLUE CROSS BLUE SHIELD OF VERMONT 2015 VERMONT EXCHANGE PRODUCTS RATE FILING ACTUARIAL MEMORANDUM

intentionally lowered its CTR requirement for the Exchange to only that necessary to avoid depletion of RBC through inadequately funded rates.

Details of Contribution to Reserve are on Exhibit 7B.

3.8.5.3. Taxes and Fees:

The proposed rates include on average 3.77 percent in Taxes and Fees. These taxes and fees are both from the State Government and the Federal Government.

The Vermont Information Technology Leaders (VITL) tax and the Health Care Claims Assessment (HCCA) are levied by the State of Vermont. They total 0.999 percent of claims, with 0.199 percent for VITL and 0.8 percent for HCCA.

The fees collected by the Federal Government include Patient Centered Outcomes Research Institute Fee (PCORI) and the Federal Insurer Fee. The PCORI fee is estimated at \$2.11 per member per year, or \$0.18 per member per month. The Federal Insurer Fee is estimated at 2.83 percent of premium.

Details of the Taxes and Fees are on Exhibit 7C.

3.8.6. AV Pricing Values

As described in the Part I Unified Rate Review Template Instructions dated April 30, 2014, the AV Pricing Value “represents the cumulative effect of adjustments made by the issuer to move from the Market Adjusted Index Rate to the Plan Adjusted Index Rate”. These adjustments are described in detail in preceding parts of Section 3.8. See Exhibit 7D for details.

3.8.7. Calibration

Age, Tobacco, and Geographic factors are not allowed in Vermont. Therefore no calibration is required.

3.8.8. Projected Loss Ratio

We assume that, since the transitional reinsurance recoveries are required to be spread across the combined market for premium determination, the MLR calculation will be done at the combined market level with a minimum requirement of 80 percent. We project that the overall Loss Ratio, using the federally prescribed MLR methodology for the combined market will be 94.2 percent, well above the minimum 80 percent required. See Exhibit 8 for details.

**BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM**

3.9. Consumer Adjusted Premium Rate Development

The Consumer Adjusted Premium rates are displayed on Exhibit 9. Since rate factors for age and geography are not allowed in Vermont, the only adjustment is the application of rating factors. As explained in section 3.4.6., Vermont has predetermined the tier factors for QHP plans. Using those tier factors, our projected membership by tier and the average members per subscriber, we calculate that the contract conversion factor to convert from PMPM to Single Rate is 1.125.

Rate Structure	Single	Couple	Adult + child(ren)	Family	Average
Exchange Tiers	1.000	2.000	1.930	2.810	1.501
Tier weights	61.9%	19.6%	3.4%	15.1%	100.0%

Average Members per Subscriber	1.688
Contract Conversion Factor	= 1.688/1.501 = 1.125

The Consumer Adjusted Premium Rates are shown on Exhibit 9.

3.10. Small Group Plan Premium Rates

All Small Groups must renew on 1/1/2015 according to the combined market rules. BCBSVT will not file small group rates for Q2-Q4 2015.

4. ADDITIONAL INFORMATION

4.1. Terminated Products

The following products will be terminated prior to 1/1/2015.

4.2. Plan Type

Our plan type is EPO.

4.3. Warning Alerts

There are no warning alerts in the Unified Rate Review Template.

5. RELIANCE AND ACTUARIAL CERTIFICATION

5.1. Reliance

We relied upon the services of Susan Stock, Managing Director with Neela Associates, Shelburne, Vermont, to assist in the analysis of the expected population eligible for the Catastrophic Plan. The results of this analysis appear reasonable.

For the metallic AV values of the standard plans we relied upon the certification provided by Julie A. Peper, FSA, MAAA, Director and Senior Consulting Actuary with Wakely Consulting. (Attachment A)

We relied upon pricing information from George N. Berry, FSA, MAAA, Principal and Consulting Actuary with Milliman, for the projected net claims costs for the pediatric dental benefits that will be offered in the Exchange plans. We provided the parameters of the pediatric dental plans to Mr. Berry, and relied on his expertise in the pricing of those benefits. (Attachment B)

We relied on vision claim estimates provided by VSP, our vision administrator. These estimates appear reasonable and consistent with costs under our current vision plans.

**BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM**

5.2. Actuarial Certification

The purpose of this rate filing is to provide the rates and a description of the rate development for the products that Blue Cross and Blue Shield of Vermont (BCBSVT) is proposing to be offered on Vermont Health Connect (VHC). These calculations are not intended to be used for any other purpose. This memorandum documents the methodology used to calculate the AV Metal Value for each Qualified Health Plan offered by BCBSVT in 2015, the appropriateness of the essential health benefit portion of premium upon which advanced payment of premium tax credits (APTCs) are based, that the Index Rate is developed in accordance with federal regulations, and that the Index Rate along with allowable modifiers are used in the development of plan specific premium rates.

I, Paul A. Schultz, am a Fellow of the Society of Actuaries, a Member of the American Academy of Actuaries, meet the Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States promulgated by the American Academy of Actuaries, and have the education and experience necessary to perform the work described herein.

In my opinion, the projected Index Rate is in compliance with all applicable State and Federal Statutes and Regulations (45 CFR 156.80(d)(1)), developed in compliance with the applicable Actuarial Standards of Practice, reasonable in relation to the benefits provided and the population anticipated to be covered, and neither excessive nor deficient. The calculations and results are appropriate for the purpose intended.

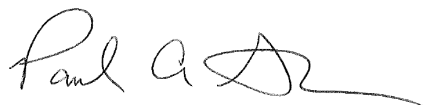

The Index Rate and only the allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2) were used to generate plan level rates. The percent of total premium that represents essential health benefits included in Worksheet 2, Sections III and IV was calculated in accordance with actuarial standards of practice.

I have relied upon the certification of AV Metal Value provided by the State for Standard Plans, and attached hereto. Metal AVs for Blue Rewards (Non-Standard) Plans were determined using the AV calculator, or in accordance with the requirements of 45 CFR 156.135(b)(3), as described in the attached actuarial certification.

This filing was prepared in accordance with generally accepted actuarial principals and methodologies, Actuarial Standards of Practice established by the Actuarial Standards Board, and applicable Federal and State laws and regulations concerning the Patient Protection and Affordable Care Act and the Health Care and Education Reconciliation Act of 2010.

**BLUE CROSS BLUE SHIELD OF VERMONT
2015 VERMONT EXCHANGE PRODUCTS RATE FILING
ACTUARIAL MEMORANDUM**

The Part I Unified Rate Review Template does not demonstrate the process used by the issuer to develop the rates. Rather, it represents information required by Federal regulation to be provided in support of the review of rate increases, for certification of qualified health plans for Federally facilitated exchanges, and for certification that the Index Rate is developed in accordance with Federal regulation, is used consistently, and is only adjusted by the allowable modifiers.

A handwritten signature in black ink, appearing to read "Paul Schultz", with a stylized flourish at the end.

BLUE CROSS BLUE SHIELD OF VERMONT 2015 VERMONT EXCHANGE PRODUCTS RATE FILING PLAIN LANGUAGE SUMMARY

Blue Cross and Blue Shield of Vermont (BCBSVT) is committed to the health of Vermonters, outstanding member experiences and responsible cost management for all of the people whose lives we touch. By pooling the populations covered by our products, we protect individuals from the unaffordable and potentially ruinous costs associated with significant illnesses or injuries. Our products promote preventive care, health maintenance and health improvement, and we have in place strong utilization management programs that support members who require medical care and assure that they have access to high value care while avoiding unnecessary costs.

BCBSVT also works with providers to dampen cost increases through reimbursement strategies that include incentives to both provide and properly manage care. BCBSVT's vision is a transformed health care system in which every Vermonter has health care coverage, and receives timely, effective, affordable care. None of this work is possible unless BCBSVT remains financially strong, and that requires that we be allowed to charge rates that cover the medical expenses of the populations we serve.

The purpose of this rate filing is to provide the rates and a description of the rate development for the products that Blue Cross and Blue Shield of Vermont (BCBSVT) is proposing to be offered in the Vermont Exchange, effective January 1, 2015.

- BCBSVT is proposing an average rate increase of 9.8 percent across all Exchange plans. This ranges from a 4.8 percent increase to an 11.8 percent increase.
- There are an estimated 35,037 contracts (57,867 members) currently enrolled with BCBSVT in a Qualified Health Plan.

Significant medical price increases were partially offset by favorable membership assumptions and reductions in BCBSVT administrative expenses. Combined, these factors produced a 3.3 percent increase in rates. The remainder of the 9.8 percent increase was driven by changes related to federal and state health care reforms, including an increase in the federal fee that is included in Exchange pricing, a reduction in federal subsidies of the premiums on Vermont's new Exchange, and a modest expansion of dental benefits for children.

- The federal government assesses a charge on all health plans to subsidize Exchange coverage for the three year-period between 2014 and 2016, through its Transitional Reinsurance Program. The subsidy is reduced in 2015 and 2016, before being eliminated entirely in 2017. Because the premium subsidy is being reduced from an estimated seven percent to an estimated three percent in 2015, it will require groups and members to pay 4.0 percent more for their coverage.
- The federal insurer fee established by the Affordable Care Act is used to provide subsidies to low-income people to help them afford to purchase Exchange products. This fee is increasing by more than 40 percent, resulting in a 0.9 percent increase in premium for Exchange products.
- The Green Mountain Care Board approved a change to enhance coverage for dental services for children. The change provides that children covered through the non-CDHP Exchange products will have access to cleanings and other services with no cost-

BLUE CROSS BLUE SHIELD OF VERMONT

2015 VERMONT EXCHANGE PRODUCTS RATE FILING

PLAIN LANGUAGE SUMMARY

sharing requirement. The enhancement in coverage raises the premium by 0.5 percent.

- Most deductibles, out-of-pocket maximums and co-pays in Exchange plans remain unchanged from 2014 to 2015. As overall costs increase and the amounts that members pay in cost-sharing contributions stays the same, more of the total cost is transferred to premiums. This had an impact of 0.8 percent on premium.

These four items drive an increase of 6.3 percent required solely because of mandated changes associated with the Affordable Care Act and Vermont benefit decisions.

In the absence of mandated changes associated with the Affordable Care Act and Vermont benefit decisions, a 3.3 percent increase would have been requested:

- An estimate of increases in the amounts providers are paid was included in 2014 Exchange rates. Increases beyond those assumptions that have already occurred in 2014, or that are projected to occur before the end of 2014, drive a premium increase of 2.9 percent. This primarily includes hospital payments under budgets approved by the Green Mountain Care Board and prescription drug prices.
- Amounts providers are paid are expected to increase by 4.8 percent in 2015. This increase flows directly to premium.
- BCBSVT assumes that “new members” who have or will enroll in our qualified health plans will prove to be significantly healthier on average than those previously insured in individual and small group products. This assumption creates a premium *decrease* of 2.5 percent.
- Other adjustments to the assumptions used in the 2014 rate development cumulatively have the effect of *reducing* the required rate increase by 1.8 percent. These include items such as updating the experience base to calendar year 2013 and observing the mix of membership actually enrolled on the Exchange in 2014. Notably, BCBSVT has:
 - Reduced the projected medical utilization “trend” (the expected increases in overall medical use) to zero,
 - Reduced its administrative expense fees, and
 - Included a one percent contribution to reserves, an amount that is lower than it would normally require for the protection of Exchange members.

BCBSVT understands the importance of adequately funding our health care system, to keep it strong and accessible. Since the factors driving this rate increase are almost entirely related to federal policy changes and increases in prices paid to medical providers in Vermont, we believe that there is no way to further reduce these rates without underfunding the health care coverage on which Vermonters rely.

I HEREBY CERTIFY that I have reviewed the applicable filing requirements for this filing, and, to the best of my knowledge, the filing complies with all applicable statutory and regulatory provisions for the State of Vermont.

Kevin Goddard
Vice President, External Affairs and Sales

RE: State of Vermont Actuarial Value Certification for 2015 Standard Plan Designs - Revised

Dear Lindsey:

The Affordable Care Act requires that health care coverage provided by issuers to non-grandfathered individual and small groups must cover all Essential Health Benefits (EHBs) and have Actuarial Values (AVs) that fall under the Platinum (90% AV), Gold (80% AV), Silver (70% AV) or Bronze (60% AV) tiers. The ACA allows for a 2% de minimis range around these target AVs. For example, any plan design that has an AV from 68-72%, would be considered a Silver plan. The Center for Consumer Information and Insurance Oversight (CCIIO) recently released the final 2015 Actuarial Value Calculator (AVC)¹ that issuers must use to determine the AV of a plan. While CCIIO anticipates that most plans will be able to use the AVC without modification, some plan designs will have features which are not supported by the AVC. In these instances, an actuary can either modify the inputs to most closely represent the plan design or an actuary can modify the results of the AVC to account for the features not supported by the AVC. An actuarial certification documenting the development of the AV for these plan designs is required.

The State of Vermont (State) is standardizing several plan designs that all issuers offering plans in the exchange, Vermont Health Connect, must offer. Issuers must offer the standard plan designs in the individual and small group merged market. One Platinum, one Gold, two Silver and two Bronze standard plan designs were developed for Vermont Health Connect. There is a traditional deductible plan at each of the four metal levels and a High Deductible Health Plan (HDHP) at each of the Silver and Bronze levels. For each of the Silver standard plan designs, the cost sharing reduction plan designs are also standard. Cost sharing reduction plan (CSR) designs were developed at each of the 73% (federal), 77% (Vermont specific), 87% (federal) and 94% (federal) AV levels.

The State contracted with Wakely Consulting Group, Inc. (Wakely) to assist in the development of the standard plan designs. The standard plan designs for 2015 include the following changes from the 2014 standard plan designs.

- If pediatric dental benefits are covered, there is no cost sharing for Class I (basic) pediatric oral health essential health benefits and the deductible must be waived
- The primary care and specialist office visits were increased by \$5 on both the Standard Silver Deductible plan and the Standard Silver Deductible 73% AV CSR plan. This increased the copays from \$20 to \$25 for primary care visits and from \$40 to \$45 for specialist visits
- The medical deductible on the Standard Silver Deductible 87% AV CSR plan decreased from \$750 to \$600
- The drug deductible on the Standard Bronze Deductible plan increased from \$200 to \$300

¹ <http://www.cms.gov/CCIIO/Resources/Regulations-and-Guidance/index.html>

March 21, 2014

Page 2

The IRS has yet to release the minimum deductible amount for HDHPs for 2015. The drug deductibles and MOOPs for HDHPs may need to change if the IRS changes the minimum deductible. The likely amounts for 2015 are \$1250 or \$1300 compared to the 2014 amount of \$1250. The current plan designs use the 2014 amounts, although Wakely did verify that if the minimum deductible is increased to \$1300, all plan designs are still within the required ranges.

Three of the standard plan designs (and the HDHP cost sharing reduction plan designs) have features not supported by the AVC and thus an actuarial certification is required. The remaining standard plan designs and their corresponding CSR plans have features that may warrant an AV adjustment but no explicit adjustment or actuarial certification has been done for these plans. In developing these standard plan designs and the resulting actuarial certification, Wakely also followed applicable Actuarial Standards of Practice (ASOP) as detailed in Appendix C and including:

- ASOP No. 23 *Data Quality*;
- ASOP No. 25 *Credibility Procedures Applicable to Accident and Health, Group Term Life, and Property/Casualty Coverage*; and
- ASOP No. 41 *Actuarial Communications*.

EXECUTIVE SUMMARY

A summary of Vermont's standard plan designs is in Appendix B. The Silver HDHP and both Bronze plans have design features that are both significant and not supported by the AVC. The Silver HDHP cost sharing reduction plan designs have similar features. The issuers that opt to offer pediatric dental would also have design features that could be significant and not supported by the AVC. While most plans have some subtleties in their design that are not supported by the AVC, CCIIO has stated and regulations dictate that modifications should be made only for substantial differences. The four potential substantial differences that Wakely considered include:

1. Family deductible and Maximum Out of Pockets (MOOPs). There are two common types of applications for deductibles and MOOPs, commonly referred to in Vermont as stacked and aggregate². The data supporting the AVC is only at the member level, and thus most closely resembles the stacked application of deductibles and MOOPs. Most HDHP plans use the aggregate application of deductible and MOOPs which can significantly lower the AV since a family of two would need to accumulate to a deductible that is twice that of a single contract. The impact is greater at higher deductible and MOOP amounts. Wakely had previously developed a model to account for aggregate family deductibles and thus, a specific adjustment has been made to the appropriate AVs for HDHPs.

² Stacked deductibles and MOOPs are typical in traditional deductible plans where the individual deductible and MOOP apply to each member of a contract and the family deductible and MOOP is used as a protection for contracts where multiple members have claims. For example, if the family MOOP is two times the individual MOOP but three members of a contract all would have reached their individual MOOP, it limits the family's liability to two times the individual MOOP.

Aggregate deductible and MOOPs are typical in HDHPs where all claims for all members of a non-single contract accumulate to the family deductible and MOOP. For two person or family contracts where only one member has significant claims, the member still must reach the higher deductible and MOOP amounts which makes the average member liability higher under an aggregate deductible.

March 21, 2014

Page 3

2. Vermont implemented a regulation (H.559 Sec. 32. 8 V.S.A. § 4089) for prescription drug deductibles and MOOPs. The requirement mandates, in part, that the MOOP for prescription drug costs in any plan design shall not exceed the minimum deductible amount for HDHPs per Section 223(c)(2)(A)(i) of the Internal Revenue Code of 1986 (\$1250 and \$2500 for individual and family coverage in 2014; 2015 amounts are not known so remain at 2014 levels). The requirement also states that for HDHPs the cost sharing benefit for prescription drugs must start after the minimum deductible amount for HDHPs (same \$1250 and \$2500 for individuals and family coverage) is met, but the amount may be met with either medical or prescription drug claims. This means that for all HDHPs, for purposes of prescription drug coverage, the deductible is considered met when accumulated medical and drug claims reach \$1250 for individual or \$2500 for family, regardless of what the medical deductible amount is. Similarly, the MOOP for only drug claims (including amounts used to accumulate to the deductible) is \$1250 or \$2500, regardless of the amount of the overall MOOP which will include both drug and medical claims.

Since for an integrated deductible and MOOP, only one amount is able to be input in the AVC, the value of the lower drug deductible and MOOP cannot be modeled in the AVC. This regulation has a significant impact on AV, particularly at the lower AV tiers where the difference between the medical and prescription drug deductible and MOOP is greater. Wakely had previously developed a model to account for Vermont's prescription drug regulation and thus, where appropriate, a specific adjustment has been made to the AVs using this model.

3. In the current market, most Vermont HDHPs waive the deductible for preventive prescription drugs. This is another plan feature not currently supported by the AVC. While Wakely has a list of the drugs for which the deductible is waived, Wakely has not analyzed the exact portion of drugs this represents. The impact to AV would only apply to drug costs that would normally be incurred prior to the member reaching the deductible. Any costs after the deductible is met and after the MOOP is met would be similar to the AVC. It is possible that this design feature could have a significant impact on the AV. However the impact of this benefit is likely not enough to warrant an additional analysis. Based on some high level estimates, Wakely believes the maximum impact to AV for this design feature is approximately 0.5% with the likely expected impact to be half of that. Since Wakely did not quantify the exact adjustment of the preventive drug difference for HDHPs, Wakely did not make a specific adjustment but did make sure that any AVs developed for HDHPs were at least 0.5% below the high end of the de minimis range in order to account for this increased benefit. It is expected that the impact for these drugs would be highest for the bronze plan where the deductible is highest and the impact would decrease as deductibles decrease (and AVs increase).
4. If a plan covers pediatric dental, starting in 2015 there can be no cost sharing for Class I (basic) pediatric oral health essential health benefits. Pediatric dental is not explicitly reflected in the federal AVC. It is included as part of the "other" benefits which are assumed to have average cost sharing for the plan. The reduction in cost sharing for the Class I benefits will result in a higher AV than what is modeled in the AVC, particularly for the higher deductible plans. It is possible that this design feature could have a significant impact on the AV. Based on some high level estimates, Wakely believes the maximum impact to AV for this design feature is approximately 0.5%. Since this adjustment may apply to some issuers and not to others, Wakely did not make a specific adjustment but did make sure that any AVs developed were at least 0.5% below the high end of the de minimis range in order to account for this benefit. It is expected that the impact for these drugs would be highest for the bronze plan where the deductible is highest and the impact would decrease as deductibles decrease (and AVs increase).

March 21, 2014

Page 4

In addition to the four features listed above, the federal AVC can produce results that are counter intuitive. For example, when the Standard Bronze drug deductible is increased from \$200 to \$300 the federal AVC produces an AV that increases by almost 2% when the AV should decrease. As a result, Wakely believes the AVC is not accurately capturing the AV of this plan design change and has made an additional adjustment to account for the change in the drug deductible. This adjustment is discussed further in the methodology section.

There are other potential design features for which adjustments could be made. However, given the expectation that adjustments be made for only the most substantive deviations, Wakely does not believe additional adjustments are warranted. It is also important to note that the bucketing of claims and the methodology used to calculate the AVC are not always clearly defined. Thus, at times it is difficult to ascertain whether an adjustment is warranted and how that adjustment would be estimated.

As stated, Wakely made explicit adjustments to account for the aggregate family deductible/MOOP and Vermont's prescription drug regulation. These adjustments are described in detail in the Methodology section. For the preventive prescription drug and pediatric dental benefits, Wakely did not make an explicit adjustment but did allow room in the AV such that an increase of up to 0.5% would not result in the AV falling outside of the required range.

The following table shows all plan designs for which adjustments were made, the adjustments considered, the original AV from the AVC, and the final adjusted AV. The pediatric dental consideration may also apply to the Platinum, Gold and Silver Deductible and CSR plans when issuers include the benefit but no explicit adjustment was made since coverage of the pediatric dental benefit is optional.

Table 1: Summary of Adjustments Considered and Final Adjusted AVs

Adjustments Considered	Silver HDHP	Bronze HDHP	Bronze Deductible *	Silver HDHP - CSR 73%	Silver HDHP - CSR 77%	Silver HDHP - CSR 87%	Silver HDHP - CSR 94%
Aggregate Ded/MOOP	Yes	Yes	No	Yes	Yes	Yes	Yes
Drug Regulation	Yes	Yes	Yes	Yes	Yes	No	No
Preventive Drugs	Yes	Yes	No	Yes	Yes	Yes	Yes
Pediatric Dental	Yes	Yes	Yes	Yes	Yes	Yes	Yes
AV from AVC	70.3%	63.6%	59.9%	74.4%	78.6%	87.7%	93.9%
Final Adjusted AV	68.7%	60.9%	61.5%	72.8%	76.8%	87.2%	93.8%

*The bronze deductible plan was also adjusted for counter intuitive AVC changes

METHODOLOGY

Since several of the standard plan designs have features not supported by the AVC, Wakely developed an HDHP model to capture the impact of these features on the AV. It was anticipated that the AVC would not accommodate all of the Vermont plan design features and this model was developed several months prior to the draft 2014 AVC being released. While there are similarities in the data used (for example, only group data is included in both models), there are also differences (for example, the HDHP model includes all members regardless of duration while the AVC includes only members who are enrolled the full 12 months).

March 21, 2014

Page 5

If a plan does have substantive differences from what the AVC allows, there are two allowed approaches defined in the federal regulations. The first allows the actuary to adjust the inputs of the plan design to “fit” it into the AVC. The second allows the actuary to put in as many of the design features as possible into the AVC and then adjust the resulting AV to account for the unique design features. Wakely determined the second approach was most appropriate for the Vermont plan design differences. Thus for the seven plan designs where adjustments were made, Wakely first input as much of the plan design as possible into the AVC and then modified the resulting AV to account for the unique features.

The following discusses the HDHP model that Wakely developed and the process used to adjust the actuarial values from the AVC.

HDHP Model

Anticipating the need to quantify some of Vermont’s unique plan design features, in mid-2012 Wakely developed an HDHP model that would account for both aggregate deductibles and MOOPs as well as quantify the impact of Vermont’s prescription drug regulation.

In developing the model Wakely was provided with membership and medical and pharmacy claims data extracts from the Vermont Healthcare Claims Uniform Reporting and Evaluation System (VHCURES). Filters were then applied to the data to target a specific population for the model and reduce the amount of records to work with. The data used included:

- Allowed commercial medical and prescription drug data that was incurred in 2010
- Products types HMO (non-Medicare risk), PPO, POS and EPO
- Used claims with a Useflag='0'
- All market categories except individual
- Limited to members in select payer ids

After all filters were applied, the remaining data included allowed claims and membership for approximately 2.5 million member months.

The methodology developed for the HDHP model does not use the traditional approach of continuance tables. When determining the paid claims and resulting actuarial value of the plan designs where the prescription drug regulation is a factor, the order in which the claims occur is important. Continuance tables fail to recognize the impact of the order of the claims on actuarial values. Thus, the HDHP model re-prices the claims based on the inputs provided in the model rather than rely on continuance tables.

The HDHP model allows a user to enter the following:

- Medical and Prescription drug deductible amounts for both individual and family contracts. These amounts can differ but the model assumes the amounts are always integrated, or that both medical and drug claims will accumulate to both deductibles, even if different amounts.
- Medical and prescription drug maximum out of pocket amounts for both individual and family contracts. These amounts can differ and the model allows for different treatment of the MOOPs as noted below.
- Medical and prescription drug coinsurance amounts. If the plan design includes copays, an effective coinsurance needs to be input.

March 21, 2014

Page 6

- The structure of the deductibles and MOOPs. As can be seen in the table below, the model can distinguish between aggregate and stacked deductibles and MOOPs. It also allows for different accumulations of claims to the medical and prescription drug MOOPs. There are five structural selections available in the model, described in the table below. Option 5 is most closely aligned to the federal AVC. Option 1 represents the design of the Vermont HDHPs.

Options	Costs that Accumulate			Deductible / MOOP Type
	Deductible	Maximum Out-of-Pocket (MOOP)		
		Medical	Rx	
1	Medical & Rx	Medical & Rx	Rx Only	Aggregate
2	Medical & Rx	Medical & Rx	Rx Only	Stacked
3	Medical & Rx	Medical Only	Rx Only	Aggregate
4	Medical & Rx	Medical Only	Rx Only	Stacked
5	Medical & Rx	Medical & Rx	Medical & Rx	Stacked

Adjusted AV Calculations

Using the federal AV calculator and the HDHP model as outlined above, the following methodology was used to develop the adjusted AV calculations for the HDHPs:

- The plan designs were entered into the AVC ignoring the separate prescription drug deductible and MOOP thresholds. The resulting AV is the unadjusted value, which does not account for the prescription drug regulations or the aggregate family deductible and MOOP levels.
- The HDHP model was used to determine the revised AV.
 - The same plan design input into the AVC was input into the HDHP model. The HDHP model only allows for coinsurance. Since the HDHP designs include copays, an effective coinsurance was developed for each plan design. The effective coinsurance amounts were developed separately for medical and prescription drug services using the allowed weights and average cost per service from the federal AVC continuance tables for the relevant metal tier.
 - The HDHP model was normalized to the AVC for each plan design. This means the same plan design, ignoring the prescription drug thresholds and assuming a stacked family deductible and MOOP, was input into the HDHP model and the underlying data was adjusted to arrive at the same AV as the AVC. This was done to ensure the same starting AV in both models and to try to mirror the induced utilization in the AVC. The normalization factors were reviewed for reasonability and deemed reasonable given they are accounting for trend, regional differences in cost and utilization and induced utilization.
 - The plan design in the HDHP model was adjusted to lower the prescription drug deductible and MOOP inputs (if applicable) to the appropriate plan design amounts. The application of deductible and MOOP was also changed to use an aggregate family deductible and MOOP and also to adjust the prescription drug MOOP to only consider prescription drug claims (the medical MOOP amount continues to use both medical and prescription drug claims).
- The resulting AV from the HDHP model is used as the final AV for tier placement.

March 21, 2014

Page 7

The HDHP model was intended only for HDHPs where medical and drug claims both accumulate to the deductible. The Bronze deductible plan needs to be adjusted to account for the lower prescription drug MOOP, but the deductible plan has separate medical and drug deductibles. Thus, the HDHP model was used but with a slight variation in methodology. The following highlight the differences in methodology used only for the Bronze Deductible plan.

1. Same as for HDHPs, as much of the plan design as possible was entered into the AVC. This is the unadjusted AV. Since the increase from a \$200 drug deductible to a \$300 drug deductible produced counter intuitive results, the 2014 plan design with the \$200 drug deductible was entered into the 2015 AVC. The Bronze Deductible plan then needs to be adjusted for the increased deductible and to account for the lower and separate prescription drug MOOP.
2. The \$200 plan design results in a reasonable AV in the final 2015 AVC so this AV was used as the starting point. The change in plan design was then accounted for using the Truven Wakely Benefit Modeler³. The ratio of the 2015 plan design (\$300 deductible) AV over the 2014 plan design (\$200 deductible) AV was applied to the federal AV for the 2014 plan design. This produced an adjusted AV that more accurately accounts for the change in the drug deductible. The AV was then further adjusted for the lower prescription drug MOOP.
3. The HDHP model was used to develop the AV adjustments in a slightly different process than for the HDHPs.
 - a. The HDHP model cannot accommodate plan designs where both medical and drug claims do not accumulate to the deductible. Thus, the same plan design was entered into the HDHP model as in the AVC but the model selection indicated that both medical and drug claims accumulated to the deductible amounts.
 - b. The HDHP model was then re-run with the lower drug MOOP and to adjust the prescription drug MOOP to only consider prescription drug claims (the medical MOOP amount continues to use both medical and prescription drug claims). The model continued to use a stacked application for deductible and MOOP since it is a traditional deductible plan.
4. The final AV is the ratio of the AV from 3c and 3b applied to the adjusted AV from 2.

Appendix D includes screen shots from the AVC and the HDHP model for each plan design with an adjusted actuarial value. Also included is a summary of the AVs and in the instance of the Bronze Deductible plan, a calculation of the adjustment.

Wakely followed the same methodology to verify that the AVs for HDHP plans remained in the acceptable range using a \$1300 deductible and MOOP for drug benefits. Appendix E includes screen shots of the HDHP results with the \$1300 deductible.

³ The Truven Wakely Benefit Modeler uses Truven's MarketScan data as the underlying data and uses continuance tables and other actuarial adjustments to estimate the paid, allowed and AVs for various plan designs.

March 21, 2014

Page 8

RELIANCES

We have relied on others for information used in the actuarial value adjustments. For the original AV, the final 2015 federal AVC model was relied on. While reasonability tests have shown some errors in the calculations and there are some assumptions and methodologies that are not consistent with expectations, the AVC was developed for plan classification and not pricing. Thus, the model is being used as such and we make no warranties for the accuracy of the AVs that result from the AVC.

VHCURES data supplied by the state was used in the development of the HDHP model. We have reviewed the data for reasonableness, but have not performed any independent audit or otherwise verified the accuracy of the data/information.

DISCLOSURES AND LIMITATIONS

Wakely is financially and organizationally independent from the State of Vermont and any issuer in the state.

Wakely does not warrant or guarantee that actual experience will tie to the AV estimated for the placement of plan designs into tiers. The developed actuarial values are for the purposes of classifying plan designs of similar value and do not represent the expected actuarial value of a plan. Actual AVs will vary based on a plan's specific population, utilization, unit cost and other variables.

The distribution of this report to other users is limited to the State of Vermont and issuers within that state that will be submitting standard plan designs. Distribution to such parties should be made in its entirety. Distribution to other parties should only be made with Wakely's consent.

Exhibit A contains the formal actuarial certification. If you have any questions regarding this letter or the certification, please contact me.

Sincerely,

Julie A. Peper, FSA, MAAA
Director and Senior Consulting Actuary

**APPENDIX A**

**Actuarial Certification
State of Vermont
Actuarial Value of Standard Plan Designs
Effective January 1, 2015**

I, Julie A. Peper, am associated with the firm of Wakely Consulting Group, Inc. (Wakely), am a Fellow of the Society of Actuaries and a member of the American Academy of Actuaries, and meet its Qualification Standards for Statements of Actuarial Opinion. Wakely was retained by the State of Vermont to provide a certification of the actuarial value of the state's standard plan designs that are effective January 1, 2015 on Vermont Health Connect. This certification may not be appropriate for other purposes.

To the best of my information, knowledge and belief, the actuarial values provided with this certification are considered actuarially sound for purposes of § 156.135(b), according to the following criteria:

- The final 2015 federal Actuarial Value Calculator was used to determine the AV for the plan provisions that fit within the calculator parameters;
- Appropriate adjustments were calculated, to the AV identified by the calculator, for plan design features that deviate substantially from the parameters of the AV calculator;
- The actuarial values have been developed in accordance with generally accepted actuarial principles and practices; and
- The actuarial values meet the requirements of § 156.135(b).

The assumptions and methodology used to development the actuarial values have been documented in my correspondence with the State of Vermont. The actuarial values associated with this certification are for standard plan designs (Silver HDHP, Bronze HDHP, Bronze Deductible, Silver HDHP CSR 73%, Silver HDHP CSR 77%, Silver HDHP CSR 87% and Silver HDHP CSR 94%) that will be effective as of January 1, 2015 on Vermont Health Connect.

The developed actuarial values are for the purposes of classifying plan designs of similar value and do not represent the expected actuarial value of a plan. Actual AVs will vary based on a plan's specific population, utilization, unit cost and other variables.

In developing the actuarial values, I have relied upon the federal Actuarial Value calculator and data from the Vermont Healthcare Claims Uniform Reporting and Evaluation System (VHCURES). I did not audit the data provided; however, I did review the data for reasonableness and consistency.

March 21, 2014

Page 10

Actuarial methods, considerations, and analyses used in forming my opinion conform to the appropriate Standards of Practice as promulgated from time-to-time by the Actuarial Standards Board, whose standards form the basis of this Statement of Opinion.

Julie A. Peper, FSA, MAAA

APPENDIX C

Comments Relative to Applicable ASOPs

This appendix includes comments relative to the following applicable Actuarial Standards of Practice (ASOP).

- ASOP No. 23, *Data Quality*;
- ASOP No. 25, *Credibility Procedures Applicable to Accident and Health, Group Term Life, and Property/Casualty Coverages*; and
- ASOP No. 41, *Actuarial Communications*.

ASOP 23: Data Quality

3.1 Overview – VHCURES data was used as the basis for the HDHP model and this data source was deemed reasonable for the analysis discussed in the management report.

3.2 Selection of Data - The data was considered reasonable for our analysis subject to the following considerations -

- a. The data sources contained all material data elements.
- b. The following considerations were reviewed as part of our analysis:
 1. Data was appropriate and sufficiently current. The data was for similar/same populations and the most applicable data set available.
 2. Data was reasonable and comprehensive of the necessary data elements.
 3. There were no known, material limitations of the data.
 4. No alternative data sets were reasonably available. The reliability of the data underlying our analysis did not require support from alternative data sets.
 5. Alternative data sets were not deemed necessary to complete the analysis.
 6. Sampling methods were not required.

3.3 Reliance on Data Supplied by Others - Reliance is discussed in the management report to which this appendix is attached.

3.4 Reliance on Other Information Relevant to the Use of Data - We relied on information contained in the report. We did not detect any material errors in the data provided and relied upon the data as part of our analysis.

3.5 Review of Data - We reviewed the data. Data definitions were included as part of the VHCURES data. Ultimately the data was reasonable with the adjustments discussed in our management report.

3.6 Limitation of the Actuary's Responsibility - We did not audit the data.

3.7 Use of Data– Use and adjustments to the data are discussed in this management report. In addition:

- a. We deem that the data are of sufficient quality to perform the analysis;
- b. The data did not require enhancement before the analysis could be performed
- c. The data was reasonable for the analysis and did not require adjustment beyond that discussed in the management report;
- d. We did not detect any material defects in any data source;
- e. The data were adequate to perform our analysis.

March 21, 2014

Page 15

ASOP 25: Credibility Procedures

The HDHP model uses data as its starting point. The experience used is fully credible and therefore no credibility blending or adjustments were necessary.

ASOP41: Actuarial Communications

This report and the actuarial memorandum submitted are consistent with the guidance in ASOP 41.

3.1 General Requirements for Actuarial Communications

3.1.1 Principal and Scope of Engagement – These results were developed to comply with § 156.135(b) and should not be used for any other purpose. The distribution of this report to other users is limited to the State of Vermont.

3.1.2 Form and Content – The State of Vermont was the principal for this engagement and the scope of the engagement included developing and certifying the actuarial values for the standard plan designs as discussed in the management report.

3.1.3 Timing of Communication – This report is provided in conjunction with the actuarial certification of the submitted actuarial values.

3.1.4 Identification of Responsible Actuary – The responsible actuary is identified in the attestation and this management report.

3.2 Actuarial Report – This management report is an Actuarial Report as defined in this ASOP. Correspondence between Wakely and the State of Vermont as part of this engagement should also be considered part of the Actuarial Report.

3.3 Specific Circumstances – No constraints apply beyond any discussed in the attachment management report.

3.4 Disclosures Within an Actuarial Report - all relevant disclosures have been made in the management report. Consistent with this ASOP, we make specific mention to the following items here:

3.4.1 Uncertainty or Risk – Uncertainty is discussed in the management report.

3.4.2 Conflict of Interest – Wakely is financially, organizationally, and otherwise independent from the State of Vermont and any reliant parties.

3.4.3 Reliance on Other Sources for Data and Other Information - Reliance regarding data and assumptions are discussed in this management report.

3.4.4 Responsibility for Assumptions and Methods - Assumptions and methods are discussed in the management report and the parties associated with the assumptions and methods have been delineated. Therefore, pursuant to this ASOP, no additional disclosure is necessary.

3.4.5 Information Date of Report -The management report list the applicable dates for the analysis and correspondence.

3.4.6 Subsequent Events - There are no subsequent events, as of the date of this report that would materially affect the results presented herein.

3.5 Explanation of Material Differences - Wakely has issued no other report regarding the development of these actuarial values. No comparison to prior results is necessary.

March 21, 2014

Page 16

3.6 Oral Communications - No oral communication is considered part of this actuarial report. Any material assumptions or methods discussed in oral communications have been documented in written form as well.

3.7 Responsibility to Other Users - Intended users of this report have been specifically noted in the document.

Introduction

On March 5, 2014, CMS released the final Rules on the Actuarial Value and the final Actuarial Value Calculator (AVC) for 2015. The final 2015 AVC is the final 2014 AVC with updated cost sharing limits. Since the AVC did not change, BCBSVT started its analysis with the 2014 results and updated the plans for known benefit changes.

Limitations of the Federal Actuarial Calculator

The AVC is known to have some limitations with respect to certain benefit designs. The most important limitations in the Final Actuarial Value Calculator for the Non-Standard plans are:

- The AVC does not support the Rx OOPM Limit as dictated by Act 171.
- The AVC does not support copayments after the deductible.
- The AVC does not support Wellness (Safe Harbor) pharmacy drugs outside the deductible on HSA compliant plans.
- The AVC does not support certain MH/SA visits at no cost share before the deductible.
- The AVC does not support a copayment on Outpatient Surgery, Urgent Care, Emergency Medical Transportation, DME services nor Home Health Care.
- The AVC does not support Class I Pediatric Dental covered at no cost share.

Method Used to Calculate Adjustments

The objective of the adjustment process is to produce an estimate of the result the AVC would have produced with respect to the specific plan in question had it been able to produce a value for that plan. We modified our pricing model to calculate the ratio of expected benefits to allowed charges. See the description of the BCBSVT AV Model (BAVM) below. We then compared the results of the BAVM with the results of the AVC for various benefit plans for which results could be obtained from both. This was done separately for blocks of plans within each of the AVC's metallic range categories. We observed that the results of the two were highly correlated. This allowed us to normalize the results of the BAVM to those of the AVC.

We begin with the result of the AVC model value for the plan incorporating all the features of the plan in question that the AVC is able to value. We then adjust this value to estimate the result of the AVC on the plan in question by applying the difference between the normalized value of the BAVM applied to the plan incorporating all the features of the plan in question, and the normalized value of the BAVM applied to the plan incorporating all the features of the plan in question that could be valued by the AVC. See the more detailed description of the adjustment method below.

METAL ACTUARIAL VALUES CERTIFICATION**

BCBSVT AV Model Methodology¹

BCBSVT uses a re-adjudication model to assess the impact of various deductible types, Rx limits, and out-of-pocket maximums to calculate the paid-to-allowed ratio for different benefit designs. The re-adjudication is performed using the same set of claims for all benefit plans. Claims data was taken from BCBSVT's data warehouse. The starting point of the analysis is allowed charges as determined by the BCBSVT claims adjudication system. The claims data includes benefit codes that enable us to identify the services and benefit structures (copays, deductibles, and coinsurance). Although the model is similar to that used for our Benefit Relativity factors, it did not include the benefit level adjustments.

The in-network claims from Insured Group and Self Funded business are included in the analysis; Individual lines of business claims have been excluded. Only plans with both medical and pharmacy benefits are included since both medical and pharmacy data is included.

The claims were categorized according to how benefits are paid, and one record was generated for each member/ service date.

For all products, claims for preventive mandated benefits were kept separate and the model assumes they are paid in a manner consistent with the mandates.

A total of 368,039 member months were used for this analysis. Because of the normalization adjustment described below, it is appropriate to use this large, credible data set as a proxy for the HHS data underlying the AV model. Non-permitted factors such as projected demographic changes were not considered in the analysis.

The model has the flexibility to apply either coinsurance or copayments after the deductible is met.

Adjustment of the Federal Actuarial Value Calculator Result using the BCBSVT Actuarial Value Model

For each Metal tier and CSR tier, we observed a correlation between the outputs of the AVC for various integrated deductible plans and BCBSVT model's paid-to-allowed ratio for those plans. From these we calculated the appropriate linear regression function to normalize the results of the BAVM to approximate those of the AVC.

The tables following the Actuarial Opinion show the relationship between the BAVM and the AVC. All the benefits used to fit the regression lines have integrated medical and drug for both the deductible and the OOPM. These benefits designs are only for In-Network claims. For each Metal tier and CSR tier, we show the regression line used to calculate the adjustment needed for items not supported by the AVC.

¹ This methodology is consistent with that described in the approved Q2 2012 Benefit Relativity Factor Filing (SERFF Tracking # BCVT-127786182, VFN 57179).

**BLUE CROSS AND BLUE SHIELD OF VERMONT

METAL ACTUARIAL VALUES CERTIFICATION**

The adjustment is calculated as:

{the difference between the actuarial value estimate from the BCBSVT model for the non-standard plan and the actuarial value estimate from the BCBSVT model for the corresponding plan having only the features supported by the AV calculator} times {the linear parameter 'm' from the regression function}².

A complete description of plan provisions is attached at the end of this document. The tables following the Actuarial Opinion contain information regarding the specific benefits that were calculated as adjustments to the AVC model.

Actuarial Opinion

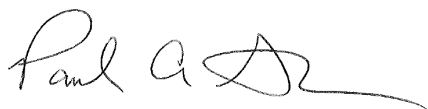

The purpose of this calculation is to comply with the requirements of 45 CFR 156.135(b)(3). The Actuarial Values were determined based on the plans' benefits and coverage data, the standard population, utilization and continuance tables published by HHS for purposes of valuation of Actuarial Value. These calculations are not intended to be used for other purposes.

I am a Fellow of the Society of Actuaries, a Member of the American Academy of Actuaries, meet the Qualification Standards for Actuaries Issuing Statements of Actuarial Opinion in the United States promulgated by the American Academy of Actuaries, and have the education and experience necessary to perform the work.

In my opinion, each of the plans described herein meets the AV requirements in the metal tiers for calendar year 2015.

The adjustments for plan design features unable to be determined directly through application of the AV calculator were developed in accordance with generally accepted actuarial principals and methodologies, Actuarial Standards of Practice established by the Actuarial Standards Board, and applicable laws and regulations, and are appropriate for the purpose intended.

Data used for the analysis were taken from the BCBSVT claims adjudication system, and normalized to the data underlying the AV calculator. This data was reviewed for reasonableness and consistency, but an audit was not performed.

Paul Schultz, F.S.A., M.A.A.A.
Actuarial Director
Blue Cross and Blue Shield of Vermont

² m*BVM(x)-b is the normalized value of the BVM result for plan x {normalized to approximate the AVC(x)}.

* Since the Federal AV Calculator does not support copays applied after the deductible, we used 80% (Insurer's cost share) as a place holder to represent that the plan has some cost sharing between the deductible and Out-of-Pocket maximum.

Items not supported by the AV Calculator:

- Rx OOPM limit of \$1,250
- Three Mental Health office visit at no cost share before the deductible
- Class I Pediatric Dental at no cost share
- Copayment applied after the deductible
- Copayment on Outpatient Surgery, Urgent Care, Emergency Medical Transportation, DME services and Home Health Care.

Cost Sharing Reduction (94%) Design

The inclusion of Mental Health office visits in the three PCP or Mental Health Office visits at no cost share before the deductible benefit and copays on Urgent Care, Emergency Medical Transportation, DME services and Home Health Care are not supported by the AVC for this plan. The difference between the AVC benefit of three PCP visits at no cost share before the deductible and the BCBSVT benefit of three PCP or MHSA visits at no cost share is immaterial³ and the addition of copays on Urgent Care, Emergency Medical Transportation, DME services and Home Health Care is also immaterial; therefore we are using the AVC directly for this plan.

Montpelier, VT 05601-0186

Re: Projected CY 2015 Net Claims Costs for Pediatric Dental

Dear Ruth:

As you requested, we have developed projected CY 2015 net claims costs for pediatric dental services. The estimates assume the pediatric dental coverage is integrated with the medical coverage, as opposed to being offered as a standalone plan. We assumed the integrated deductible applies to all dental services except Class 1 services, except for the CDHP plans and the Catastrophic plan where it also applies to Class 1 services. This is a significant change from the 2014 benefits where the integrated deductible applies to Class 1 services for all plans. We modeled results for each of the six standard medical plans specified by the State, as well as the four non-standard plans designed by Blue Cross and Blue Shield of Vermont (BCBSVT). The projection is appropriate for CY 2015; adjustments should be made for rates that apply to subsequent periods.

The projected CY 2015 net claims cost per child per month amounts are shown below for each plan:

Medical Plan	Projected Dental Cost
Standard Platinum	\$38.77
Standard Gold	\$33.62
Standard Silver	\$28.78
Standard Bronze	\$25.71
Standard Silver CDHP	\$16.56
Standard Bronze CDHP	\$13.70
Non-Standard Gold	\$31.83
Non-Standard Silver	\$28.54
Non-Standard Bronze CDHP	\$6.28
Non-Standard Catastrophic	\$4.94

Ms. Ruth Greene
May 26, 2014
Page 2 of 6

It should be noted there is a considerable amount of uncertainty in these projections. BCBSVT does not have credible dental claims experience, and as a result, the estimates are based on manual rates using the Milliman Dental Cost Guidelines (DCGs). Beyond the normal level of uncertainty associated with manual rates, there are a number of elements in this pricing that create significant additional uncertainty, such as the integration of medical and dental benefits, potential pent-up demand for dental services, no annual maximum benefit limit, and uncertainty in identifying medically necessary orthodontia services.

It is our understanding that these estimates will be added without any adjustment to BCBSVT's estimates of medical costs to develop premium rates, and that normalization for the expected impact of various rating factors does not apply.

These estimates are intended to assist BCBSVT with its development of proposed CY 2015 rates for individual and small group business that will be sold on the Vermont Exchange for a 1/1/2015 effective date. The estimates may not be appropriate for any other use.

Development of Projected Claims for Non-Orthodontia Services

The projected claims costs for non-orthodontia are based on the Milliman Dental Cost Guidelines (DCGs). The DCG starting costs reflect national average billed charges. The methodology consists of the following steps:

- *Starting Costs* – The DCGs contain starting data by age/gender category. We used the average claims costs for ages 0-21 based on the BCBSVT age mix within the 0-21 age band.
- *Area* – We adjusted the national average starting data to statewide Vermont based on area factors contained in the DCGs.
- *Trend* – We trended the CY 2013 starting data to CY 2015 using a 5% annual trend.
- *Discounts* – We used the 2013 fee level data provided by BCBSVT to develop discount percentages, which were then applied to the projected 2015 billed charges.
- *Benefit Richness* – We made adjustments to reflect the expected impact of member cost sharing on projected utilization levels. These adjustments are based on the Milliman Dental Cost Guidelines and actuarial judgment.
- *Pent-Up Demand* – We assumed most members would not have prior dental coverage based on information provided by BCBSVT. The DCGs suggest a factor of 1.30 for new business; however that factor applies to a standard population. We reduced the DCG factor to 1.15 to reflect the expected lower impact for the mix of services expected for children. BCBSVT expects this level to moderate to 1.10 for members in their second year of coverage. Based on the expected mix of first and second year members in 2015, BCBSVT estimates an average factor of 1.11.
- *Projected Allowed Costs* – Applying the adjustments described above results in the projected allowed costs for non-orthodontia costs.

Ms. Ruth Greene
May 26, 2014
Page 3 of 6

- *Projected Net Costs* – As mentioned above, the projections assume the dental benefits are integrated with medical, as specified by BCBSVT. The projections reflect the medical benefits for the six medical plans specified by the State and the four non-standard plans designed by BCBSVT. The medical benefits are shown in the attached tables. The dental coinsurance is 100/70/50% on Classes 1-3 services, respectively, except that Space Maintainers are covered at 100% and Bridges and Simple Repairs are covered at 70%. We developed the net costs in two steps.

In the first step, we modeled the medical benefits and determined the portion of the deductible and out-of-pocket maximum that would be filled by medical claims, and the portion that would remain to be applied to dental services. We modeled the medical benefits using a child claims probability distribution from the Milliman Health Cost Guidelines (HCGs), scaled to match the projected CY 2015 child allowed PMPM of \$266 provided by BCBSVT. We performed a simulation of 10,000 members and tabulated the remaining deductible and out-of-pocket maximum amounts.

In the second step, we used the remaining deductible and out-of-pocket maximum amounts and the dental coinsurance percentages to develop dental net claims costs for each of the modeled 10,000 members. The dental development is based on a child non-orthodontia dental claims probability distribution from the DCGs that is scaled to the projected dental allowed claims PMPM described above. The overall projected dental net claims cost is the average of the dental net claims cost for each of the 10,000 modeled members.

By assuming the medical benefits apply to the deductible and out-of-pocket maximum prior to any dental claims, the projected net claims cost for dental services is overstated. However, our understanding is that BCBSVT is not reflecting the impact of dental costs on the deductible and out-of-pocket maximum in its development of the medical costs, and these projected dental amounts are intended to represent the estimated incremental cost of dental services relative to the medical cost estimates developed by BCBSVT.

Development of Projected Costs for Orthodontia Services

The orthodontia coverage includes medically necessary orthodontia only. While the State's benefit description does include the criteria that define medical necessity, it was not possible to precisely identify medically necessary orthodontia in the orthodontia data available to us.

We started with a child orthodontia claims probability distribution from the DCGs, area adjusted to statewide Vermont and trended to CY 2015. We assumed that medically necessary orthodontia would have a higher average annual claims amount than non-medically necessary orthodontia. We assumed that 30% of children with orthodontia costs greater than \$3000 would have medically necessary orthodontia. This results in just under 30% of the overall orthodontia costs being allocated to medically necessary orthodontia.

We modeled orthodontia claims separately from non-orthodontia claims. We assumed the integrated deductible and out-of-pocket maximum apply to orthodontia, and we applied 50% coinsurance. In the orthodontia development we assumed children with medically necessary orthodontia claims have

Ms. Ruth Greene
May 26, 2014
Page 4 of 6

twice the level of medical claims on average due to the nature of their conditions, and average levels of non-orthodontia costs.

Limitations

The following limitations apply to our analysis.

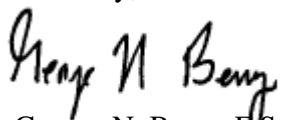

- *Data Reliance* – In performing our analysis, we relied on data and other information provided by BCBSVT. We have not audited or verified this data and other information. Such a review is beyond the scope of our assignment. If the underlying data or information is inaccurate or incomplete, the results of our analysis may likewise be inaccurate or incomplete.
- *Variability* – It is certain that actual experience will not conform exactly to the assumptions used in this analysis. To the extent that actual experience is different from the assumptions used in the projections, the actual amounts will also deviate from the projected amounts. We recommend that BCBSVT monitor the emerging experience and make adjustments as warranted.
- *Distribution and Use* – This letter has been prepared for the use of and is only to be relied upon by the management of BCBSVT. No portion of this letter may be provided to any other party without Milliman's prior written consent, which consent shall not be unreasonably withheld but may be conditioned upon the execution by a third party of Milliman's standard release form; provided however, BCBSVT may provide the letter to any applicable governmental or regulatory agency as required by law. In the event such consent is provided, the letter must be provided in its entirety. Milliman does not intend to benefit any third party recipient of its work product, even if Milliman consents to the release of its work product to such third party.

Qualifications

This report may be considered a statement of actuarial opinion under guidelines promulgated by the American Academy of Actuaries. I am a member of the American Academy of Actuaries and meet its Qualification standards to render the opinion contained herein.

Please call me if you have any questions or if there is any additional assistance that we can provide.

Sincerely,

George N. Berry, F.S.A.
Principal and Consulting Actuary

RE: Blue Cross and Blue Shield of Vermont – NAIC # 53295
2014 Exchange Rate Filing – Amended Per GMCB Order
SERFF Tracking # BCVT-128957017, VFN 65563

Dear Phil:

Pursuant to your request during our conference call of Tuesday, July 16, we are providing documentation of our methodology and calculations for incorporating the Corrected Decision and Order from the Green Mountain Care Board into our Exchange filing. We step through each Conclusion of Law sequentially below.

I. The Board Accepts the Commissioner's Recommendations that BCBSVT be Required to

a. Decrease its Pediatric Dental Cost by \$0.10

The Projected Allowed Claims for Pediatric Dental (Item e₆ of the Index Rate calculation, See Exhibit XIV) was decreased from \$7.65 to \$7.55.

b. Recalculate its Anticipated Recovery from the Transitional Reinsurance Program

We recalculated the Transitional Reinsurance recoveries for the Individual population (including groups of one) and for the Small Group population (excluding groups of one). The two distinct expected recoveries PMPM are included in Exhibit XV. Using the projected individual membership distribution and our expected distribution of members previously in Individual or Small Group, we calculated an overall expected recovery PMPM of \$54.62 PMPM. This expected recovery reduces the index rate by \$31.03 when adjusted to reflect the expected ratio of individuals to total Exchange members.

	Individual Population (Including Groups of 1)	Small Group Population (Excluding Groups of 1)	Total Population
Average PMPM Recoveries	\$60.48	\$40.09	= \$60.48*0.713 + \$40.09*0.287 = \$54.62
Portion of the total Projected Individual Pool previously in:	71.3%	28.7%	100%

Item I.c. and Item II. specified use of utilization factors.

c. Use Standard HHS Induced Utilization Factors in Determining its Plan-Specific Rate Adjustments

II. The Board Rejects the Commissioner's Recommendation to Modify the Filing by Ordering that the Carrier Adjust for the Impact of Increased Utilization on its CSR Silver Plans and Reduces BCBSVT's Overall Utilization Assumption by 1%.

To address both of these items, we derived the underlying formula for the HHS Factors to be $\text{Utilization} = (\text{Model AV})^2 - (\text{Model AV}) + 1.24$. For each benefit in the experience period, we calculated a utilization factor. We then weighted the factors with the experience membership. The overall experience utilization factor is 1.0741. Using the same method on the projected membership distribution, the projected overall utilization factor is 1.0450. The ratio of these two factors ($1.0450/1.0741=0.9729$) is the Impact of different benefit plans (Item 1+c₁ of the Index Rate calculation, See Exhibit XIV).

We have also used the HHS factors to calculate the plan specific rate adjustment, which results in some rebalancing among the products. Specifically, CDHP plans are now priced less favorably relative to copayment plans. The factors used for each product can be seen on Exhibit V.

III. BCBSVT Must Reduce its Pharmacy Trend From 6.5% to 4.5%.

We changed Exhibit II to reflect a 4.5% pharmacy trend. This is also reflected in Item 1+d₁ of the Index Rate Calculation.

Model COVERAGE CATEGORY	Experience Period Membership	2012 Pharmacy Allowed PMPM	2014 Pharmacy Allowed PMPM (Using Original 6.5% Trend)	2014 Pharmacy Allowed PMPM (Using Revised 4.5% Trend)
Catamount Direct Pay	38,011	\$122.21	\$138.61	\$133.46
Catamount Subsidized	133,909	\$88.03	\$99.85	\$96.13
Nongroup/Safety Net	25,288	\$98.76	\$112.02	\$107.85
BCBS SG-CDHP	119,377	\$46.29	\$52.50	\$50.55
BCBS SG-NonCDHP	123,786	\$59.54	\$67.53	\$65.02
BCBS SG-POS	3,901	\$76.33	\$86.58	\$83.35
TVHP SG-CDHP-PHO	129,680	\$56.95	\$64.59	\$62.19
TVHP SG-NonCDHP-PHO	27,639	\$81.85	\$92.84	\$89.38
TVHP SG-CDHP-NonPHO	100,266	\$69.28	\$78.58	\$75.66
TVHP SG-NonCDHP-NonPHO	28,762	\$82.82	\$93.94	\$90.44
Weighted Average PMPM		\$69.94	\$79.33	\$76.38
Overall Annual Trend			6.5%	4.5%

IV. BCBSVT's Strong Financial Health Supports a Reduction in Proposed Contribution to Surplus from 1.0% to 0.5%.

We reduced the Contribution to Reserve from 1.0% to 0.5%. See Exhibit VIII for detail.

V. The Carrier Must Adjust its Assumption Regarding Morbidity of the Newly Insured.

We started with the projected 2014 EPO Allowed PMPM for each coverage category. We then adjusted the subsidized coverage category (including members previously from Catamount, VHAP and Uninsured) to reflect the 2% reduction in morbidity. Using the projected membership and comparing the weighted averages, we calculate the aggregate utilization adjustment as $\$488.66/\$491.29=0.9946$. This factor is reflected in Item 1+b₃ of the Index Rate Calculation (See Exhibit XIV).

Model COVERAGE CATEGORY	Projected Membership	2014 EPO Allowed	Adjustment for Projected Newly Insured Population	Adjusted EPO Allowed	
Catamount Direct Pay	3,082	\$861.52	1.00	\$861.52	
Catamount Subsidized	14,023	\$593.28	0.98	\$581.41	
Nongroup/Safety Net	2,093	\$524.04	1.00	\$524.04	
BCBS SG-CDHP	9,853	\$396.28	1.00	\$396.28	
BCBS SG-NonCDHP	10,217	\$429.98	1.00	\$429.98	
BCBS SG-POS	322	\$510.04	1.00	\$510.04	
TVHP SG-CDHP-PHO	10,703	\$397.69	1.00	\$397.69	
TVHP SG-NonCDHP-PHO	2,281	\$445.05	1.00	\$445.05	
TVHP SG-CDHP-NonPHO	8,275	\$469.85	1.00	\$469.85	
TVHP SG-NonCDHP-NonPHO	2,374	\$576.24	1.00	\$576.24	
Weighted Average		\$491.29		\$488.66	0.9946

VI. The Board modifies BCBSVT's 2014 Vermont Health Connect Rate Filing by reducing the proposed rate for its non-standard silver copayment plan by 4.3% as described in the above conclusions of law.

To comply with this portion of the order, we modified the plan level adjustment *the plan's provider network, delivery system characteristics, and utilization management practices* to reflect the Board's desire to reduce the Non-Standard Silver copayment plan by precisely

Phil Keller
July 17, 2013
Page 4

4.3% from the filed rate. A factor of 1.00006 was then applied to all other plans to create an overall annual premium decrease equal to that calculated by applying each of the specific Conclusions of Law explicitly, as described above. See Exhibit V for details.

Sincerely,

A handwritten signature in cursive script, appearing to read "Ruth K. Greene".

June 16, 2014

Mr. Josh Hammerquist, A.S.A., M.A.A.A.
Assistant Vice President & Consulting Actuary
Lewis & Ellis, Inc.

**Subject: Your 06/11/2014 Questions re: Blue Cross and Blue Shield of Vermont
2015 Exchange Filing (SERFF Tracking #: BCVT-129572217)**

Dear Mr. Hammerquist:

In response to your request dated June 11, 2014, here are [your questions](#) and our answers:

1. General

- a. Please provide the final 2014 URRT and describe if the PMPMs are directly comparable to the 2015 URRT. If any of the PMPMs are not comparable, please describe why and include a numerical example.*

Please see *Unified_Rate_Review_Template_BCBSVT_2014_Final_Amended_Rates.xlsx* for the final 2014 URRT. Please note that the PMPMs are not directly comparable from 2014 to 2015. Based upon guidance provided for 2015, we use a plan level adjustment to develop the PMPM for each plan, then apply a single factor to convert to Consumer Adjusted Premium Rates (a concept that was absent in 2014). Last year, in the absence of more specific guidance, we developed contract conversion factors varying by type of plan (CDHP vs. Non-CDHP) that we applied to the PMPMs in the URRT in order to calculate the Single Rates. From the rates, we then calculated the PMPM for the URRT based on projected members and contracts in each tier.

In other words, the Plan Level Adjusted Index Rate from the 2015 filing is not directly comparable to the PMPM from the Rate Build-up from the 2014 filing. Numerical examples are below.

2014 URRT

Tier	2014 Standard Silver Deductible		2014 Standard Silver CDHP	
	Rate	Projected Contracts	Rate	Projected Contracts
PMPM from the Rate Build up	\$379.77		\$384.46	
Contract Conversion Factor	1.1196		1.0738	
Single	\$425.19	8,161	\$412.83	11,677
Couple	\$850.38	1,763	\$825.66	0
Adult and Child(ren)	\$820.62	175	\$796.76	175
Family	\$1,194.78	1,801	\$1,160.05	1,801
Per Contract Total	\$610.47	11,900	\$516.32	13,653
Per Member Total - Shown in URRT	\$380.23	19,106	\$368.98	19,105

2015 URRT

Tier	2015 Standard Silver Deductible		2015 Standard Silver CDHP	
	Rate	Projected Contracts	Rate	Projected Contracts
Plan Level Adjusted Index Rate	\$418.56		\$391.37	
Contract Conversion Factor	1.1246		1.1246	
Single	\$470.70	4,632	\$440.12	3,460
Couple	\$941.40	1,466	\$880.24	1,095
Adult and Child(ren)	\$908.46	258	\$849.44	193
Family	\$1,322.67	1,130	\$1,236.74	844
Per Contract Total	\$706.54	7,487	\$660.66	5,592
Per Member Total - Shown in URRT	\$418.56	12,638	\$391.37	9,439

2. Changes to Initially Filed Rates in 2014

- a. *Please provide a breakdown of the changes that happened during the interrogatories with the actuaries or due to a decision made by the Board to the assumptions and rates that were initially filed in 2014.*

Please see attached *Exhibits for Detail Explanation of Order Calculation - 2014 Exchange Filing.pdf* and *BCBSVT 2014 Exchange Filing - Method for applying the GMCB corrected Order.pdf* for the breakdown of the changes due the decision made by the GMCB for the 2014 rates.

3. Reason for Rate Increase

The section in question was intended to be a high-level summary of the approximate impact of various meaningful items, and involved a series of covariant calculations separate from the actual rate development.

- a. *Please provide the percentage of the increase that is due to changes in the amounts providers are paid that are projected to occur before the end of 2014 beyond the original assumptions for 2014. In other words, please split the 2.9% increase from the top of page 5 of the Actuarial Memorandum into those that have already occurred and those that are projected to occur.*

The 2.9% increase splits into 0.9% for increases that have already exceeded the unit cost trend assumption from the 2014 filing, and 2.0% for increases expecting to occur through the balance of 2014. This 2.0% consists primarily of a full year of pharmacy unit cost increases and the impact of an additional round of GMCB hospital budget increases on approximately one calendar quarter of facility charges.

- b. *Please reconcile the 4.8% increase in 2015 due to amounts providers are paid with the trend exhibits provided.*

There are some very minor inconsistencies between the figures in the “Reasons for Rate Increase” section and the information provided, and calculated more precisely, for the

Actuarial Data Set. (Note that the Actuarial Data Set is the only source of trend information split between the two projection years.).

The projected unit cost increase for 2015 is 5.0%, as can be calculated from information provided in the Actuarial Data Set. It may have been more precise to use this figure to represent the increase in 2015 due to amounts providers are paid.

- c. Please provide the calculation of the 2.5% decrease due to “new members” who have or will enroll in the qualified health plans who will be significantly healthier on average than those previously insured in individual and small group products.*

The 2.5% decrease is not a factor that was applied explicitly within the rate development. Rather, it is an approximation of the impact of a number of changes within the base data, as well as several assumptions described within the Actuarial Memorandum. These include:

- For 2014 rates, the GMCB ordered a utilization reduction of 1%, and a further adjustment due to an assumption that healthy uninsured would enroll through Vermont Health Connect. These assumptions were not part of our rate development process. The impact on 2014 rates of these two adjustments was approximately 1.9%, so the removal of these ordered reductions increases 2015 rates relative to 2014 by about 1.9%.
- Exhibit 2B from the Actuarial Memorandum illustrates the calculation of the -0.8% rate impact due to the assumed impact of new entrants.
- The Change in Pool Morbidity (1+b9 from Exhibit 5 of the Actuarial Memorandum) is the impact of continuing members having lower claims costs than the overall experience base. For purposes of display in this section, we split this -5.7% impact into -3.5% due to the assumptions that new members would have claims costs similar to that of continuing (rather than all base period) members, adjusted for demographics, and that individuals enrolled in our Access to Care plan would not ultimately enroll in a QHP, and -2.3% attributable to an observation of claims costs for the portion of projected membership representing continuing members who did enroll in a QHP. The latter impact is discussed below.

- d. Provide a more detailed quantitative breakdown of the other adjustments used in the 2014 rate development that cumulatively have the effect of reducing the required rate increase by 1.8%.*

The other adjustments include the impact of all assumptions and methodology used in the rate development, as described throughout the Actuarial Memorandum. The impact of these items is generally quite small, and several pieces are challenging to quantify. They include:

- The requested 1.0% CTR represents is greater than the 2014 ordered CTR of 0.5%. This has a rate impact of about 0.6%.
- Administrative charges are lower than those filed last year. The rate impact is about -0.6%.
- The membership mix in our base experience was different from that underlying the base experience used in the 2014 rate development. This has a rate impact of about 1.4%.
- The enrollment split between Individual and Small Group differed significantly from our expectation. Transitional Reinsurance recoveries using our actual enrollment mix will

be less than those expected using the assumptions underlying our 2014 rate development. This has a 1.5% rate impact.

- We have observed that continuing members (that is, those members in a BCBSVT product in 2013 who enrolled in a QHP during 2014) had a lower average claims cost than the overall base membership. The rate impact of adjusting for this observation is -2.3%.
- Utilization trend in the 2015 rate filing is 0.0% for medical and 1.9% for pharmacy. The overall utilization trend of about 0.3% is lower than last year's assumption of 1.6%. This had an impact of -1.0% on rates.
- The contract conversion factor was updated to reflect actual enrollment, as described in Section 3.4.6 of the Actuarial Memorandum. The rate impact was -1.5%, as calculated by taking the ratio of the factors from the 2015 and 2014 filings.
- The minor mis-estimation of the 2015 unit cost increase, as described above in our response to Question 3b, lends 0.2% of impact to this "other adjustment" category.
- Changes not described above account for a balance of less than a tenth of a percent impact on rates. A more detailed analysis of this small impact is unavailable at this time.

e. Provide quantitative and qualitative support for the 4.0% increase in rates that is attributed to the reduction in the transitional reinsurance program. How many member months were used to develop this estimate?

This 4.0% estimated increase was calculated by applying the proposed 2015 reinsurance parameters to the transitional reinsurance estimate included in the 2014 rate filing. As described in the letter attached to question 2 (BCBSVT Exchange Filing - Method for applying the GMCB corrected Order.pdf), the expected transitional recoveries in the 2014 Exchange Filing were calculated by splitting our experience period into two models: Individuals including Groups of One and Small Groups excluding Groups of One. The models had 262,979 and 470,618 member months respectively. The claims in each model were trended to 2014 using the trends in the 2014 Exchange filing. Two distinct sets of PMPM costs were weighted based on projected membership. To calculate the impact of the 2015 reinsurance parameters, we used the total experience (all 733,597 member months) and modeled both the 2014 parameters and the 2015 parameters. The ratio of the two results for expected recoveries was applied to the 2014 expected recoveries to estimate the impact of the new transitional reinsurance parameters.

Input	2014 Program	2015 Program
Reinsurance Program Parameters	\$60,000 attachment point 80% recovery \$250,000 reinsurance cap	\$70,000 attachment point 50% recovery \$250,000 reinsurance cap
Expected Recoveries on Individual Members	\$54.62 PMPM	\$26.26 PMPM
Expected Recoveries spread over Single Risk Pool	\$31.03	\$14.92
Reinsurance Fee	\$5.25	\$3.67
Reduction of Projected Allowed Claims	-\$25.78	-\$11.25
Rate Impact vs. 2014		4.0%

Please note that the 2015 PMPM figures in the above tables do not match the estimates in the 2015 Exchange Filing. The above calculation is intended to be an estimate of the impact of the change in parameters on the rate increase, using 2014 filing membership and experience assumptions. The result would be different if a different order of operations were chosen. For the 2015 Exchange Filing, we updated the experience period, membership projections and parameters to generate an entirely independent, updated estimate of the reduction of projected allowed claims due to the Transitional Reinsurance program.

f. Provide quantitative and qualitative support for the 0.8% increase in rates that is attributed to benefit leveraging.

The actuarial values for each benefit plan were calculated as described in Section 3.8.1.1 of the Actuarial Memorandum. To generate the 2014 values, one year of trend was first removed from the underlying cost projections. Results are as follows:

Benefit Plan	Actuarial Value			Members
	2014	2015	Change	
Non-Standard Gold	81.8%	82.4%	0.7%	2,765
Non-Standard Silver	74.4%	75.2%	1.0%	3,677
Non-Standard Bronze CDHP	65.9%	66.7%	1.3%	2,792
Standard Platinum	92.4%	92.6%	0.3%	12,857
Standard Gold	84.2%	84.7%	0.6%	7,088
Standard Silver	75.6%	76.3%	1.0%	12,638
Standard Silver CDHP	76.3%	77.0%	0.8%	9,439
Standard Bronze	66.6%	67.5%	1.3%	2,711
Standard Bronze CDHP	69.2%	69.9%	1.1%	4,135

Using projected membership from the 2015 filing as weights, we calculate an average change of 0.8%. (Note that recreating the Catastrophic model would have involved a great deal of effort. The projected 88 members in the Catastrophic plan rendered that plan irrelevant as part of this approximation.)

4. Changes in the Morbidity of the Population Insured

a. Provide a comparison of the 2014 enrollment by age, gender and plan to the projected 2015 membership by age, gender and plan.

Please see *Reponses to BCBSVT 2015 Exchange Filing Inquiries - 06.11.2014.xlsx*, tabs “Q4a - 2014 Enrollment” and “Q4a - 2015 Projected.” The difference between the two tabs is the addition to the projected membership of the 3,145 Small Group members with renewal dates of May 2014 and beyond.

b. Describe the year to date paid claims and earned premiums that are available and discuss whether or not they should be considered in the rate development.

Year to date March results were the most recent published financials when we finalized our assumptions for the 2015 filing. The exchange had a monthly average of 30,262 members during Q1. As of April 22, 2014, there were 55,045 members enrolled in a QHP product. The delay in the start of the Exchange has caused unexpected results for both paid claims and earned premiums.

BCBSVT enabled a contingency plan to extend 2013 benefits for any individual or small group employer who had not gone through the Exchange as of January 1, 2014. Many members subsequently made it through the Vermont Health Connect (VHC) during Q1 and were retroactively enrolled back to January 1. This created issues for any member who had claims before the retroactive enrollment was effectuated, as the claims were paid under their 2013 benefit but premium was booked to the Exchange line of business. Another part of the contingency plan was to carry over to their QHP product any member out-of-pocket costs accumulated during Q1 for members electing to extend their 2013 plan. This helped to create a seamless transition for the member but created higher than expected plan payments in the Exchange line of business since members were not starting their benefit accumulators at \$0.

There was also a group of members who had signed up through VHC but had not yet been effectuated because premiums had not been received and processed. To make sure they did not have any gap in coverage, BCBSVT enrolled these members in an “access to care” group whereby members could fill their prescriptions or see their doctors and receive, once effectuated, the medical benefits for which they signed up. Through the end of Q1, there were many members who had received care without the receipt of premium.

Due to the significant issues listed above, we did not consider year to date 2014 financials when developing the 2015 rates. Many of the items that are impacting the 2014 results are “one-time” issues that BCBSVT expects to be remedied by the 2015 enrollment period.

5. Changes in Benefits

- a. In Exhibit 5, should the change in the Benefit Adjustment factor (1+c1) from the 2014 to 2015 filings be shown in the “Reason for Rate Increase” illustration? If so, please demonstrate the impact.*

The Benefit Adjustment factor (1+c1) impact measures a change from the base period to the projection period, rather than a change from the previous to the current filing. It is of questionable utility to attempt to separate the Benefit Adjustment factor from the balance of changes due to the update in base experience data. The impact of using updated experience is captured within the “Other Adjustments” in the “Reason for Rate Increase” illustration. Please see our answer to Q3d for details.

- b. Describe the source of the each of the benefits listed below in more detail. Is the data based on insured members? Were adjustments made to the data to fit the population that will be covered?*
- i. Pediatric Vision Benefit*

As described in the Actuarial Memorandum, the estimate for the Pediatric Vision Benefit was provided by our vision vendor VSP. We have forwarded this question to the vendor and will provide additional information when it becomes available.

ii. Pediatric Dental Benefit

As described in the Actuarial Memorandum, the estimate for the Pediatric Dental Benefit was provided by George N. Berry, F.S.A., of Milliman. In attachment C, Mr. Berry described the method used to calculate the estimates. The “estimates are based on manual rates using the Milliman Dental Cost Guidelines (DCGs).” Mr. Berry then adjusted the DCG for age/gender and area: “The DCGs contain starting data by age/gender category. We used the average claims costs for ages 0-21 based on the BCBSVT age mix within the 0-21 age band...We adjusted the national average starting data to statewide Vermont based on area factors contained in the DCGs.”

6. Changes in Demographics

- a. In Exhibit 5, please explain the necessity of the Changes in demographics (1+c3) after adjustments were made for Impact of the Health Status of the newly insured (1+b3) and Changes in pool morbidity (1+b9).*

The Change in Pool Morbidity measures the impact of removing from the starting claims costs members who had not enrolled in BCBSVT QHPs by April 22, 2014. The Change in Demographics then adjusts for the overall demographic difference between the projected period population and the continuing members (i.e. those who had enrolled in a BCBSVT QHP by the date above). Finally, we adjusted for the morbidity impact of the new members based on the experience projection category to which they belong, as described in Section 3.4.2 of the Actuarial Memorandum. Since the overall change in demographics is adjusted for in (1+c3), the new member morbidity impact needs to be normalized for demographics - conceptually the new member should be assigned the claim cost impact of a similar (age, sex) continuing member in the category. This was accomplished through the mechanism illustrated in Exhibit 2B accompanying the Memorandum. Through this normalization, we believe that we have maintained the independence of each of these three adjustments. Each is necessary in order to accurately reflect the demographics and morbidity of the projected population relative to the base period population.

7. Other Adjustments

- a. From Exhibit 5, how much of the pharmacy rebates (e1) in the experience period is estimated? How do the estimated experience period pharmacy rebates compare to the actual 2012 pharmacy rebates?*

For the experience period of CY 2013, 74% of the pharmacy rebates (\$1,861,231 of \$2,509,837) were estimated. The actual pharmacy rebates for CY 2012 were \$2,604,160, or \$3.57 PMPM.

- b. Provide quantitative support for the cost of the Vermont Vaccine Purchasing Program Payments for children and adults.*

As described in the actuarial memorandum, we imputed a charge for each claim where the vaccine is provided by the state. . The amount imputed was calculated by comparing the

assessment charges by the state to actual experience. We are assessed by the state annually and we updated the rates on 5/1/2013, which is why each vaccine appears twice. Please see *Responses to BCBSVT 2015 Exchange Filing Inquiries - 06.11.2014.xlsx*, tab “Q7b” for the details of the number of claims and the amount imputed for the experience period.

- c. This question involves Confidential and Proprietary information and will be provided under separate cover.
- d. *In Exhibit 5, provide the calculation of the net cost of reinsurance (e5). Were any adjustments made to the claims data used in the BCBSVT Large Claims and Stop Loss Filing (BCVT-129374060)?*

As described in the BCBSVT Large Claims and Stop Loss Filing (BCVT-129374060), BCBSVT has purchased reinsurance for claims in excess of \$600,000 for 2014, and expects to purchase similar reinsurance in future years with limits approximately equal to the 2014 limit increased by trend. We estimate that the target loss ratio for the reinsurance is approximately 75%, which implies a cost of reinsurance of approximately 33% of claims above the reinsurance limit. For each pricing period starting quarter, we determined an annual cost of reinsurance for the trended reinsurance limit by multiplying the expected annual claims cost above the limit by 33%. Dividing this by 12 produces the PMPM cost of reinsurance. For the projection period starting on January 1, 2015, the calculation was:

2014 Reinsurance Limit	(a)	\$600,000
Trend	(b)	1.041
2015 Reinsurance Limit	(c) = (a) x (b), rounded to the nearest 5,000	\$625,000
Expected Claims above the limit	(d)	\$39.10
Cost of Reinsurance	(e)	33%
PMPM	(f) = (d) x (e) / 12	\$1.08

8. Contract Conversion Factor

- a. *From Exhibit 5, please discuss the appropriateness of reducing the projected index rate by the Changes in Family Tiering (1+c6) and/or any guidance provided by CCIIO about this adjustment factor. Was any consideration given to making this adjustment in the ‘cost-sharing design of the plan’ to avoid reducing the allowed costs? Demonstrate compliance with the definition of the projected index rate in the Part I Instructions.*

Based on guidance provided to us by our reviewing actuaries during the rate review process for the 2014 Exchange filing, it was our understanding that Plan Level adjustments, other than the Paid to Allowed Ratio, needed to average to 1.000 across all plans. To achieve this, we were to include the Changes in Family Tiering (1+c6) factor in the index rate. We have maintained this methodology in the 2015 filing in the face of apparently contradictory instructions and/or guidance.

If the non-normalized adjustment were applied as a plan level adjustment without the (1+c6) factor in the Index Rate, impact on rates would be minimal (less than \$0.03 on Single Rates).

9. Projected Risk Adjustments PMPM:

- a. Based on the support provided, the risk adjustment in cell V35 on WS 1 of the URRT should be -\$0.08. If this is correct, please update the URRT accordingly.*

Yes, the risk adjustment in cell V35 on WS1 of the URRT should be -\$0.08. Per your guidance, we will update the URRT accordingly at the end of the review process.

10. Benefit Richness Adjustment

- a. Provide qualitative and quantitative support for the benefit richness adjustment factors for medical and pharmacy in Exhibit 6C.*

Medical Benefit Richness Adjustment: An independent analysis was performed to measure the correlation between the benefit design and the quantity of medical services consumed. Group claims and membership data from January 2009 through August 2013 were examined, and a modeled paid-to-allowed ratio was assigned to every benefit in the experience period. The correlation used the paid-to-allowed ratio as the independent variable and the utilization frequency (defined as Professional and Outpatient visits + Inpatient Admissions) as the dependent variable. A 2nd order polynomial was found to best fit the data. The polynomial was then normalized such that the paid-to-allowed ratio underlying the base BRV benefit (manual rate) returned a utilization adjustment of 1.00. In other words, if a simulated benefit has a paid-to-allowed ratio less than that of the average benefit, then utilization will be reduced (i.e. factor < 1.00). If a simulated benefit has a paid-to-allowed ratio greater than the average, then the benefit will have induced utilization (i.e. factor > 1.00). The final polynomial used for the medical benefit richness adjustment was $1.0782 \times (AV_{med})^2 - 0.9525 \times (AV_{med}) + 1.0353$.

Pharmacy Benefit Richness Adjustment: Independent analysis was performed to measure the correlation between the benefit design and the quantity of pharmacy prescriptions consumed. The pharmacy benefits are adjusted in two ways. First, the generic utilization varies with the benefit designs. Group claims and membership data from January 2009 through August 2013 were examined, and a table was created to adjust the base generic utilization up or down depending on the difference in the Generic and Brand copays of the member's drug plan. The adjustments used for this were 1.0178 for non-integrated plans and 0.9876 for integrated plans.

Second, a separate analysis was done to adjust for the overall pharmacy benefit. A modeled paid-to-allowed ratio was assigned to every benefit in the experience period. The correlation used the paid-to-allowed ratio as the independent variable and utilization frequency (defined as number of scripts) as the dependent variable. A line was found to best fit the data. The line was then normalized such that the paid-to-allowed ratio underlying the base BRV benefit (manual rate) returned a utilization adjustment of 1.00. The final line used for the pharmacy benefit richness adjustment was $0.6784 \times (AV_{rx}) + 0.4304$.

Please see Responses to BCBSVT 2015 Exchange Filing Inquiries - 06.11.2014.xlsx, tab "Q10a" for the details.

b. Please discuss the changes in the benefit richness adjustments from the prior filing.

For the 2014 Exchange Filing, the induced utilization factors were derived from the same methodology as described in our 2014 Benefit Relativity Filing (SERFF # BCVT-128829812). Two analyses were done at that time to measure the relationship between the paid-to-allowed ratios and the utilization frequency, one for non-integrated plans and one for integrated plans. Different polynomials were applied to non-integrated plans and integrated plans. In their order, the GMCB modified the induced utilization factors to the standard HHS Induced Utilization Factors.

c. Were any steps taken to assure that the benefit richness adjustments did not include any differences in utilization due to differing health status of people with different cost-sharing designs, per page 26 of the Part I Instructions?

As described above, the benefit richness adjustments were calculated using group experience over a 56-month experience period. The use of group data minimizes the potential for selection bias within the experience period data, while the extremely long period examined serves to minimize any impact of random differences in health status among those enrolled in various benefit designs.

No explicit or implicit adjustments were made to reflect differences in health status among the actual or assumed enrollees in any particular benefit design, in accordance with the Instructions.

11. Impact of Specific Eligibility Categories for the Catastrophic Plan

a. Please elaborate on which adjustment for the catastrophic plan causes the method described on the bottom of page 24 in the Actuarial Memorandum to skew the Plan Adjusted Index Rate.

The process of converting our projected fee-for-service experience allowed charges, paid to allowed ratios and other claims expenses to the definitions of the Plan Adjusted Index Rate creates the “skew” factor described at the bottom page 24 of the memo. It is a combination of all adjustments that adds to the “skew” factor. Tables 1 and 2 below illustrate how each component is slightly different after we calibrated/normalized all adjustments to the Plan Adjusted Index Rate definition. Since the Catastrophic plan has its own specific plan level adjustment, it is the only plan that needs an additional balancing item.

Table 1 From Exhibit 6 B/E

(a)	\$492.65	Projected Allowed for Experience EHB (Projected FFS Experience Allowed)
(b)	67.99%	Paid to Allowed Ratio
(c)	0.9109	Benefit Richness Adjustment
(d)	0.9469	Tier Ratio Adjustment
(e)*	0.6013	For Catastrophic Only - Impact of Eligibility
(f)	(\$6.52)	Non-system claims + additional EHB not in experience + transitional reinsurance program
(a)x(b)x...(e) + (f)	\$167.18	Expected Claims Cost

Table 2 From Exhibit 6A

(a)	\$493.19	Market Adjusted Index Rate
(b)	66.59%	Paid to Allowed Ratio
(c)	0.9091	Benefit Richness Adjustment
(d)	0.9459	Tier Ratio Adjustment
(e)**	0.6013	For Catastrophic Only - Impact of Eligibility
(f)**	0.9846	balancing item to get back to \$167.18
(a)x(b)x...(f)	\$167.18	Expected Claims Cost

*(e) in Table1 = 0.6581 x 0.9137 as described on page 24 of the memo

** (e) x (f) in Table2 = 0.5920 as seen in Exhibit 6A

Exhibits 6B, 6C and 6D illustrate the differences due to the normalization of items (a), (b), (c) and (d) of Tables 1 and 2 above.

12. This question involves Confidential and Proprietary information and will be provided under separate cover.

13. Administrative Expense Load

a. Please provide the total administrative costs and member months for the combined BCBSVT individual members, BCBSVT small group members and TVHP small group members for the prior 5 years.

We started reporting our expenses for Large Group and Small Group separately in 2011. To help with your review, we are providing 5 years of data for the Enterprise and 3 years of data for BCBSVT small group, TVHP small group and Individuals. Please note that the individual line does not include our Medicare Supplement products.

Total Enterprise

Year	Member Months	Operating Expenses	PMPM
2009	1,864,180	\$62,131,729	\$33.33
2010	1,798,360	\$60,732,076	\$33.77
2011	1,919,868	\$59,730,786	\$31.11
2012	2,172,794	\$59,660,007	\$27.46
2013	2,340,495	\$64,234,940	\$27.45

BCBSVT small group, TVHP small group and Individual products

Year	Member	Operating	PMPM
------	--------	-----------	------

	Months	Expenses	
2011	513,626	\$14,924,564	\$29.06
2012	738,317	\$19,002,034	\$25.74
2013	736,695	\$21,905,701	\$29.74

b. Please provide a comparison of the 2014 and 2015 administrative expenses, and justify the differences.

The following information was provided in the Actuarial dataset on June 4, 2014:

	PMPM in 2014 Exchange Filing	PMPM for CY 2013	PMPM in 2015 Exchange Filing
Payroll and Benefits	\$14.40	\$14.31	\$12.79
Outsourced Services (EDP, claims, etc.)	\$6.10	\$6.07	\$6.92
Auditing and consulting	\$2.21	\$2.61	\$1.81
Marketing & Advertising	\$0.49	\$0.84	\$0.33
Legal Expenses	\$0.22	\$0.21	\$0.11
Other General Admin Expense	\$5.70	\$5.32	\$4.82
Taxes, Licenses & Fees	\$0.50	\$0.44	\$0.45
TOTAL	\$29.62	\$29.81	\$27.22

For the 2014 Exchange Filing, we used the October 2011 - September 2012 experience trended to calendar year 2014 using a 2.6% trend rate.

For the 2015 Exchange Filing, we used the calendar year 2013 experience period and removed one-time expenses that were related to the VHC startup, as we do not expect those expenses to be recurring in 2015. No trend was applied to the 2013 experience period.

The difference between the 2014 Exchange Filing and the 2015 Exchange Filing is attributable to additional operating efficiencies realized during 2013 or expected to be realized during 2014.

14. Profit (or Contribution to Surplus) & Risk Margin

a. Provide quantitative support for the requested contribution to reserve.

There are three types of events that affect the surplus of insurers:

1. Random fluctuations from expected. For this purpose these are defined as deviations from expected results that are symmetrically distributed about the best estimate, which is the expected level. Typically a contribution to reserve is not required to maintain surplus with respect to these events since it is expected that favorable fluctuations will offset unfavorable ones over time.
2. Benefit trend increases the need for surplus over time. The impact of benefit trend on surplus is illustrated in Responses to BCBSVT 2015 Exchange Filing Inquiries - 06.11.2014.xlsx, Q14 tab, which demonstrates that a contribution to reserve of about 1% is required to maintain surplus relative to required capital levels in the face of

current benefit trend assumptions. (Please note that the result is sensitive to the magnitude of the benefit trend.)

3. Exceptional or non-recurring events which are typically not provided for in pricing (and hence do not generate offsetting favorable events). Pertinent examples include the extension of existing small group and individual products without required rate increases, and the additional administrative burden of contingency plans for VHC operations. These types of events are not typically reflected in pricing (and costs for these specific events have not been included within this filing). Maintenance of adequate surplus is the mechanism used by Insurance companies to address these contingencies.

In normal circumstances, CTR would include some additional margin to protect member reserves against the occurrence of exceptional events. Because of the already-significant rate increase in this newly-established market, BCBSVT has intentionally lowered its CTR requirement for the Exchange to only that necessary to avoid depletion of RBC through increases in required capitalization due to ongoing benefit trend.

15. This question involves Confidential and Proprietary information and will be provided under separate cover.

16. Exhibit 6A

- a. *We note that several exhibits use the Plan Level Adjusted Index Rate as the average premium. Please discuss if the Plan Level Adjusted Index Rate is the expected premium or if it is 3.6% lower than the actual expected premium due to the Changes in Family Tiering adjustment discussed above.*

The Plan Level Adjusted Index Rate is the average expected premium on a per member per month basis.

The adjustment for “family tiering” is actually an adjustment for the couple, adult and child(ren) and family tiers for aggregate deductibles and for the adult and child(ren) and family tiers for stacked deductible plans. Since the state has defined the contract factors as 1, 2, 1.93 and 2.81, we adjusted every plan based on the four tier ratios needed compared to the mandated tiers (as shown in Exhibit 2D). Simply applying single conversion factor (1.1246) to the Plan Level Adjusted Index Rate would create more revenue than is required given the benefit designs and our child to adult relationships. As explained in our answer to question 8, we adjusted the Index Rate for this because of our understanding of plan level adjustments averaging out to 1.00.

Applying the Change in Family tiering as only a plan level adjustment, rather than as a normalized plan level adjustment and an adjustment to the Index Rate, would have minimal impact on the Plan Level Adjusted Index Rate.

17. Exhibit 6B

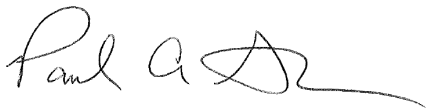

- a. *Please discuss the difference between the AV Metal Value and the Paid to Allowed Ratio for EHB Portion in Exhibit 6B for the plans listed below. Note that we are not suggesting that the AV Metal Values and the Paid to Allowed Ratios should reconcile. However, large discrepancies merit further review.*
 - i. *Standard Bronze CDHP*
 - ii. *Standard Silver CDHP*

As you point out, the AV Metal Values and the Paid to Allowed ratio will not necessarily reconcile. BCBSVT did not calculate the AV Metal Value for the Standard plans. The methodology used differs greatly for aggregate plans to the methodology used to calculate the paid to allowed ratio. Both plans that have large discrepancies are aggregate CDHPs that were certified to be in their respective metal levels by the State's actuary, Wakely Consulting. Wakely adjusted their AV Metal Values for aggregate benefits. We did not adjust our Paid to Allowed ratios for aggregate benefits, instead making a separate plan-level adjustment described as the Family Multiplier Adjustment.

Also, as explained in Attachment B, BCBSVT did not update the underlying model for the AV Metal Value since the Federal AV Calculator was not updated. Therefore, the Metal AVs are in 2014 terms. For the Paid to Allowed Ratios, updated experience trended to 2015 was used. Therefore some differences due to leveraging exist as well.

Please let us know if you have any further questions, or if we can provide additional clarity on any of the items above.

Sincerely,

A handwritten signature in cursive script, appearing to read "Paul Schultz", followed by a long horizontal flourish.

Paul Schultz, F.S.A., M.A.A.A.

July 2, 2014

Mr. Josh Hammerquist, A.S.A., M.A.A.A.
Assistant Vice President & Consulting Actuary
Lewis & Ellis, Inc.

**Subject: Your 06/30/2014 Questions re: Blue Cross and Blue Shield of Vermont
2015 Exchange Filing (SERFF Tracking #: BCVT-129572217)**

Dear Mr. Hammerquist:

In response to your request dated June 30, 2014, here are *your questions* and our answers:

1. Pediatric Dental

- a. Provide quantitative support for the \$42.49 allowed charges for pediatric dental. How does this figure reconcile to the projected dental costs found in the Milliman report?*

The report from Milliman contains the expected paid claims for each proposed benefit. The underlying allowed charges were provided to us in a separate communication. To calculate the average allowed charges, we applied the projected membership weights to each of the plans.

Plan	Projected Allowed Charges per Child	Portion of the Projected Membership
Standard Platinum	\$45.04	22.1%
Standard Gold	\$44.15	12.2%
Standard Silver	\$43.04	21.7%
Standard Bronze	\$41.67	4.7%
Standard Silver CDHP	\$40.28	16.2%
Standard Bronze CDHP	\$39.60	7.1%
Blue Rewards Gold	\$43.49	4.8%
Blue Rewards Silver	\$42.68	6.3%
Blue Rewards Bronze CDHP	\$35.68	4.8%
Blue Rewards Catastrophic	\$33.71	0.2%
Average Allowed Charges	\$42.49	

- b. We note that “there is a considerable amount of uncertainty” in the projected pediatric dental claims costs. Was any margin included in the pediatric dental claims costs to reflect this uncertainty?*

No additional margin was included to reflect this uncertainty.

- c. *Provide the benefit richness adjustments used in 2015 for each pediatric dental plan. Why was this adjustment assumed to be prohibited in 2014 but not in 2015?*

From our consultant:

We apply the benefit richness adjustment in two steps:

First we apply an adjustment that reflects the impact of the dental coinsurance levels and no annual maximum benefit relative to the benefit level underlying the Milliman Dental Cost Guidelines which reflect 100/80/50 coinsurance and a \$1500 annual maximum benefit. These factors are the same for all plans: Class 1: 1.05, Class 2: 1.09, and Class 3: 1.10.

Second, we apply an adjustment to reflect the impact of the deductible on utilization levels. These factors only apply to the classes to which the deductible applies. The factors are shown below:

Plan	Factor
Platinum	0.960
Gold - Standard	0.920
Silver - Standard	0.870
Silver - Standard CDHP	0.870
Bronze - Standard	0.810
Bronze - Standard CDHP	0.855
Gold - Blue	0.890
Silver - Blue	0.855
Bronze - Blue CDHP	0.765
Catastrophic - Blue	0.720

- d. *Please clarify how these projected dental amounts are representative of the estimated incremental cost of dental services relative to the medical cost estimates developed by BCBSVT, in light of the medical claims being applied to the deductible and out-of-pocket maximum prior to the dental claims.*

From attachment C:

By assuming the medical benefits apply to the deductible and out-of-pocket maximum prior to any dental claims, the projected net claims cost for dental services is overstated. However, our understanding is that BCBSVT is not reflecting the impact of dental costs on the deductible and out-of-pocket maximum in its development of the medical costs, and these projected dental amounts are intended to represent the estimated incremental cost of dental services relative to the medical cost estimates developed by BCBSVT.

Milliman is correct in stating that the development of medical costs and the tier factors, BCBSVT based the calculations on the distributions of medical claims so that the estimate needed is the incremental increase in total claims due to dental, not the amount of claims paid for dental services. That is the amount paid for a medical claim processed after a claim for dental services would be different (higher) than the amount paid for the medical claim in the absence of any dental claims.

2. Pediatric Vision

- a. *Per the response to question 5b dated June 16th, 2014, please provide support for the projected allowed claims for pediatric vision. We have included the question below for your convenience.*

Describe the source of the each of the benefits listed below in more detail. Is the data based on insured members? Were adjustments made to the data to fit the population that will be covered?

The expected paid claims cost for pediatric vision benefits was provided by our vision vendor, VSP. The initial rating was developed using fee data applicable to Vermont, along with utilization patterns derived from the child populations of two jumbo groups with plans that were similar to the Exchange offerings.

- b. *We note that it was “assumed that the paid benefits would not be materially different from the allowed charges.” Please clarify if this means that zero cost sharing was assumed for pediatric vision benefits.*

We assumed that the rate impact of variations in cost sharing with respect to this benefit would be minimal. We assumed the expected paid claims were a reasonable estimate of the allowed charges and that there was no difference between the allowed and paid amounts. The benefit is integrated with the medical plan and, as such, is subject to the same cost sharing provisions. However, unlike most medical treatments subject to cost sharing, there is a significant amount of discretion available to the insured with respect to the scheduling of these procedures. In particular the insured can schedule these later in the plan year when the cost sharing may be reduced due to family deductibles and out-of-pocket limitations not totally dependent on the individual’s own experience.

- c. *Please provide a quantitative estimate of the cost sharing for pediatric vision benefits.*

Zero. As noted in (b) we assumed no material rate impact due to cost sharing variations with respect to this benefit.

3. Pharmacy Trend

- a. *Please provide quantitative and further qualitative support for the adjustment made to account for the expected May 2014 launch of generic Copaxone.*

Every month, our Pharmacy Benefit Manager sends us their Patent Expiration Report. Their report projected that a generic version of Copaxone was expected to be launched in May 2014. We used that information to support the adjustment to the Specialty Trend.

To calculate the two percent dampening of the expected specialty trends, we split the specialty experience between Copaxone and Other Specialty. We first used 24 months regression on Monthly data to project the cost of Copaxone and Other Specialty. We then adjusted the cost of Copaxone by 10 percent upon generic launch and a total of 30 percent upon multi-source availability (as explained on page 15 of the Actuarial Memorandum) to account for lower expected allowed charges for generic Copaxone. Using

average days supply in calendar year 2013 as weights, we calculated expected cost trends with and without the adjustment.

See attached *Responses to BCBSVT 2015 Exchange Filing Inquiries - 06.30.2014.xlsx*, Tab Q3 for the detailed calculation.

4. Medical Trend

a. Please provide a quantitative demonstration of the expected cost shift due to the proposed 1.6% increase for Medicaid rates.

As noted on page 16 of the actuarial memorandum, we chose not to further increase our medical trend for the potential upward impact the then-proposed 1.6% increase for Medicaid would have on Commercial rates increases.

To estimate the impact, we used data from the GMCB's 2012 Vermont Health Care Expenditure Analysis¹. The weights from slide 18 were used to calculate the overall cost increases.

Payer	% of Total Expenditure	2014 Cost Increase	2015 Cost Increase
Medicaid	25%	3.0%	1.6%
Medicare	21%	2.5%	2.5%
Private Insurer and OOP	51%	5.1%	5.4%
Other Government Payers	3%	4.0%	3.8%
GMCB's Target		4.0%	3.8%

- Other Government Payers were set to the target.
- 2014 Medicare was estimated to achieve the total target of 4.0%.
- 2015 Medicare was set equal to the estimated 2014 Medicare increase. Please note that a lower increase would result in additional cost shift to private insurers.
- 2015 Private Insurer and OOP was calculated to achieve a total target of 3.8%

We estimate that due to the 1.6% increase to Medicaid and with constant Medicare increases, the Commercial rates would increase by about 5.4%, or 0.3% more than the 2014 increases to achieve the targeted 3.8% overall increase.

5. Base Experience Period

a. We note that the fourth quarter of 2013 was impacted by a significant increase in utilization leading up to the implementation of Vermont Health Connect. Was any consideration given to using a different base experience period? For example, the experience from October 1, 2012 to September 30, 2013 would exclude the increased utilization leading up to the implementation of Vermont Health Connect.

The "significant increase in utilization" was a phenomenon observed within the pharmacy experience. An analogous increase in medical claims was not in evidence. As stated in the

¹ http://gmcboard.vermont.gov/sites/gmcboard/files/GMCB_2012_Expenditure_Analysis_Res_Prov_2014_2_20.pdf

Actuarial Memorandum, "While there may have been a 'rush to services' in advance of moving to Vermont Health Connect, this effect would be more profound on prescription drugs where claims are more frequent and the timing of which is more subject to manipulation." It did not appear that there was an increase in fourth quarter medical utilization beyond that expected due to the seasonal pattern of benefits with relatively high deductibles.

In order to maximize our experience base, we thought it prudent to use calendar 2013 experience as the baseline for medical claims. Particularly given the absence of evidence for a "rush to services," there was no basis for us to believe that using Q4 2012 data, with an extra year of trend, would lead to a more accurate result than using the most recent experience available to us at the time of the filing. In fact, the additional variables of a less consistent population and additional required trend argue that such a change would in all likelihood be less accurate.

The increase in fourth quarter 2013 utilization for prescription drugs may have partially been a one-time event due to the advent of Vermont Health Connect. We have not been able to complete a study identifying or measuring this impact, largely due to the lack of credible data available for calendar 2014. While we were careful to exclude this quarter from the trend analysis, as we felt that resulting trends might be overstated, we are less hasty to exclude the data from the base experience, for a variety of reasons:

- Given that we could not positively identify or measure the impact of Vermont Health Connect on pharmacy utilization, we cannot definitively conclude that the uptick in utilization was a one-time event. It would be imprudent to exclude this period altogether on the basis of incomplete evidence.
- Excluding fourth quarter 2013 would involve using a different set of membership than we employed for medical base experience. Beyond making the calculations significantly more difficult (all factors would need to be calculated twice and blended), using different bases introduces a serious issue with consistency in that the two populations may have differing underlying morbidity.
- Benefits for nearly all members change as of January 1. Including data that crosses benefit years leads to yet another set of adjustments that must be made in order to properly reflect induced utilization across a broad array of plan designs.
- The impact of such a change in methodology would be minimal with respect to the combined medical/pharmacy benefit. Given the questionable additional accuracy of such an approach, as discussed in the previous bullet points, the computational difficulties in starting with separate sets of cross-benefit year base period experience outweigh any additional precision that might arguably be gained through such an approach.

6. Population Risk Morbidity

- a. Please provide quantitative support for the average age-gender factors used to calculate the factors below shown in Exhibit 5:*
 - i. (1+b9) The Impact of the Health Status of the Newly Insured*
 - ii. (1+c3) Changes in demographics (age, gender, region, etc.)*

As described in the actuarial memorandum, we used Milliman Health Cost Guidelines age-gender factors to calculate the factors (1+b9) and (1+c3) on Exhibit 5. These guidelines are proprietary and we cannot share them.

Per our phone discussion, we will instead provide how age-gender factors calculated using the experience period from the filing compare to the Milliman Health Cost Guidelines:

Age Category	Member Months	Ratio of BCBSVT to Milliman
Ages 20-24	54,720	1.109
Ages 40-44	58,738	1.077
Ages 60-64	99,352	0.951

The member months used from our own experience fall well short of a credible figure necessary to produce an age curve, particularly at any level of detail and without graduation. Nonetheless, our results for a single year of claims track quite closely with the Milliman factors, as demonstrated in the graph below.

The Milliman Health Cost Guidelines are a widely-accepted industry standard in health care pricing.

7. Other Adjustments

- a. *We note that in the response to question 7a dated June 16th, 2014 that 74% of the CY 2013 pharmacy rebates were estimated. Has the company received any additional information regarding the CY 2013 rebates since the initial filing was made? Is this lag associated with the CY 2013 rebates typical for the Company?*

We have not received any additional information regarding CY 2013 rebates since the time of the initial filing. A six to nine month reporting lag is typical for pharmacy rebates. We understand that our PBM implemented a new claims platform during 2013, problems with which are leading to the current extended reporting lag.

8. *Transitional Reinsurance Recoveries*

- a. *Please provide additional quantitative support for the expected reinsurance recoveries for individual members. The additional support should include the frequency and average allowed claims used in the calculation for both the 2014 and 2015 reinsurance recoveries split into the following categories:*
- i. *< \$60,000*
 - ii. *\$60,000 - \$70,000*
 - iii. *\$70,000 - \$250,000*
 - iv. *\$250,000 +*

Table 1 shows a comparison of continuance tables underlying the 2014 filing as well as the 2015 filing. The 2014 model consisted of a blend of small group and individual experience since it was expected that the 2014 individual exchange market would be comprised of both types of members. It was assumed that the morbidity of those moving from small groups to the individual market would reflect that of the average small group. The 2015 model also assumed a blend of small group and individual experience; however, the small group experience used in the model was comprised of the experience of the specific 6,500+ small group members that had already migrated to the individual exchange market. The allowed charge PMPM of the migrating members is higher than that of the average small group. Note that the tables are roughly proportional except at the very high claim levels.

Table 1

D	Allowed E[Allowed Charge PMPM > D]		Frequency % of Claimants > D	
	2014	2015	2014	2015
-	\$ 553.16	\$ 640.54	-	-
60,000	\$ 87.86	\$ 104.70	1.3%	1.6%
70,000	\$ 76.97	\$ 90.09	1.0%	1.3%
250,000	\$ 16.35	\$ 16.64	0.1%	0.1%

Table 2 illustrates the expected drop in transitional reinsurance recoveries using both the 2014 and 2015 models. Despite the difference in the underlying population of the respective models, the expected difference due to the parameter changes is similar.

Table 2		PMPM	
	Transitional Reinsurance Benefits	2014 Filing	2015 Filing
2014 Benefit	$(E[X - 60K]_+ - E[X - 250K]_+) \times 80\%$	\$ 57.21	\$ 70.45
2015 Benefit	$(E[X - 70K]_+ - E[X - 250K]_+) \times 50\%$	\$ 30.31	\$ 36.73
% Change in 2015 Benefit/2014 Benefit		-47.0%	-47.9%

Table 3 shows the calculation from expected allowed charges for individuals only to the expected reinsurance recoveries built into the Market Wide Adjusted Index Rate.

Table 3

	2014 Filing	2015 Filing
Individual Allowed	\$ 57.21	\$ 36.73
Individual Benefit Paid*	\$ 54.62	\$ 34.54
% Individual	56.80%	40.43%
Total Expected Recovery	\$ 31.02	\$ 13.96

*Benefit paid amounts come from our re-adjudication model

9. *Benefit Richness Adjustment*

a. Please provide further support that the “use of group data minimizes the potential for selection bias within the experience period data.” To what degree do the members of the groups in the experience period data have choices between plans with different actuarial values?

BCBSVT has a set of underwriting rules that minimizes the potential for selection bias.

For Small Group, the number of products offered depends on the number of covered active subscribers.

Number of covered active subscribers	Number of Products offered
Less than 5	1
Between 5 and 24	2
25 or more	3

For Large Groups, although we have recommendations for the maximum number of products offered, groups can negotiate the number of products they want to offer. We have strict guidelines that dictate that premium between the leanest and richest plans must be within 20%, to limit the potential for selection.

We also have requirements for all groups:

- A group cannot offer both a HSA plan with preventive riders and a HSA plan without preventive riders
- A group cannot offer both a plan with drug coverage and a plan without drug coverage
- The choice of plan offered should never include identical, or nearly identical medical benefits, together with meaningfully different prescription drug plans.
- A group cannot offer both a plan with a vision material rider and a plan without a vision material rider

The analysis done to calculate the Induced Utilization formula used group data from August 2012 to July 2013. This experience period includes 1,563,348 member months. Note that one of our associations was reported as only one group rather than the many groups in each association. Small Groups within the associations would have to follow the UW guidelines about the number of products they can offer. We know that they had only 1

or 2 product options and have estimated the split based in information provided by our sales department.

Below is the distribution of membership by the number of products they could choose from.

Number of Products Available	Member Months
1	577,329
2	332,577
3	157,946
4	77,664
5	33,917
6	203,198
7	51,946
8	95,215
9	1,405
10	25,677
12	6,475
Total	1,563,348

68% of the membership had three options or less and 99% of the members with six product choices could only choose plans with paid to allowed ratios between 82.5% and 98.8%.

10. Administrative Expenses

a. Please provide the CY 2013 Supplemental Health Care Exhibit and reconcile to the 2013 figures provided in the previous response.

Please find attached both BCBSVT and TVHP Supplemental Health Care Exhibits for 2013. Administrative expenses are contained in lines 1.05, 1.06, 1.07, 6.1 to 6.5, 8.1, 8.2, 10.1 to 10.4 and 12. Please note that a portion of the federal income taxes are included in line 1.05 per the instructions for the Supplemental Health Care Exhibit.

The expenses in those exhibits are on a statutory basis. In our previous answer 13, we provided administrative expenses, net of broker commissions, on a GAAP basis.

Below is the reconciliation from the Supplemental Health Care Exhibit and our previous answer 13.

Supplemental Health Care	Line	BCBSVT	TVHP	TOTAL
Federal Taxes and Assessments	1.05	(\$1,741,945)	\$319,235	
State Insurance	1.06	\$55,473	\$13,216	
Regulatory authority licenses and fees	1.07	\$164,408	\$244,666	
Improve health outcomes	6.1	\$2,208,384	\$570,062	
Activities to prevent hospital readmissions	6.2	\$146,014	\$41,654	
Improve patient safety and reduce medical errors	6.3	\$104,813	\$29,734	
Wellness and health promotion activities	6.4	\$1,969,812	\$571,691	
Health Information Technology expenses related to health improvement	6.5	\$655,931	\$163,934	
Cost containment expenses not included in quality of care expenses in Line 6.6	8.1	\$5,358,397	\$837,020	
All other claims adjustment expenses	8.2	\$25,678,883	\$5,608,128	
Direct sales salaries and benefits	10.1	\$853,861	\$502,284	
Agents and brokers fees and commissions	10.2	\$2,673,723	\$5,747,833	
Other taxes (excluding taxes on Lines 1.5 through 1.7 and Line 14 below)	10.3	\$0	\$0	
Other general and administrative expenses	10.4	\$17,127,462	\$5,265,196	
Income from fees of uninsured (Cost Plus Reimbursements)	12	(\$19,558,061)	\$0	
Total Administrative Expenses from Supplemental Health Care Exhibits	(A)	\$35,697,155	\$19,914,653	\$55,611,808
Federal Income Taxes included in line 1.05	(B)	(\$3,042,344)	\$0	(\$3,042,344)
Statutory to GAAP	(C)	\$14,713,733	(\$711,389)	\$14,002,344
Broker Commissions	(D)	\$2,673,723	\$5,747,833	\$8,421,556
GAAP Administrative Expenses (net of Broker Commission) = (A)-(B)+(C)-(D)		\$50,779,509	\$13,455,431	\$64,234,940

The majority of the difference between Statutory and GAAP reporting is the treatment of Cost Plus reimbursements, partially offset by an item for expenses paid to other Blues plans when our members use their networks.

11. Taxes and Fees

- a. *We note that the 2014 estimate of the Federal Insurer Fee was increased by 41.25%. Why was the increase applied to the rounded 2014 estimate, rather than the actual unrounded 2014 estimate?*

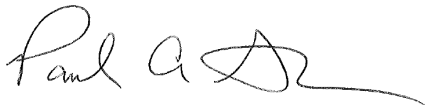

This question is misleading in that the "actual" estimate was the rounded percentage, rather than the unrounded calculation. The 2014 estimate was rounded up to account for unknowns in the actual amount BCBSVT will be assessed. Specifically, large groups are incentivized to become self-insured as a means of avoiding federal and state fees and

mandates. This could result in misestimation of the BCBSVT share of total insured premiums. More importantly, as our own groups increasingly shift to self-insurance, the premium base for the collection of the federal assessment dwindles. Therefore, it is necessary to collect a higher percentage than the unrounded calculation in order to fully fund the federal assessment. Lacking a means to perform a more specific estimate of this impact, we simply rounded up to the nearest whole percentage in the 2014 Exchange filing.

The 41.25% increase is, factually, the amount by which the total federal industry assessment increases from 2014 to 2015. In the absence of any additional information regarding the BCBSVT estimated or actual assessment, we applied this percentage to our previous estimate. This ensures consistency from year to year, particularly with respect to the still-unknown impact of the ongoing shift toward self-insurance.

Please let us know if you have any further questions, or if we can provide additional clarity on any of the items above.

Sincerely,

A handwritten signature in black ink, appearing to read "Paul Schultz", with a stylized flourish at the end.

Paul Schultz, F.S.A., M.A.A.A.

[illegible]

(To Be Filed by April 1)

NAIC Company Code: 53295

The expense allocations utilized in preparing the Supplemental Health Care Exhibit were built from the Plan's previously existing cost allocations used in the completion of the Analysis of Operations by Line of Business (page 7) and the Underwriting & Investment Exhibit - Part 3 (page 14). The existing system already allocated expenses by LOB and between the BAE, CCE, and GAE categories, by expense line and by cost center/department. For purposes of completing the Supplemental Health Care Exhibit, the Plan first identified all incurred QI expenses that were determined to meet the definitions developed by the NAIC. These expenses were allocated between the 5 QI categories by specifically identifying the costs associated with performing the QI activities, by department and by expense line, and aligning them based on our interpretation of the definitions and examples provided for each of the 5 categories in the instructions. As the QI expenses are a subset of the Plan's overall administrative costs, the QI items were allocated by LOB and BAE/CCE/GAE category in proportion to how the applicable expense line within the particular department was allocated in the overall cost accounting system. As the Plan's operations are confined to the State of Vermont, there was no allocation of expenses between states/jurisdictions.

[illegible]

Detailed Description of Quality Improvement Expenses:

1 Expense Type from Part 3	2 New	3 Detailed Description of Expense
HIT Expenses for Health Care Quality Improvements		
HEDIS reporting	BCBSVT completes various reporting of HEDIS measures for public reporting mandated by VT law.
NCQA accreditation	As part of the NCQA accreditation process, the Plan performs many activities related to reporting and analysis of clinical effectiveness and related measures.

SUPPLEMENTAL HEALTH CARE EXHIBIT'S EXPENSE ALLOCATION REPORT
(To Be Filed by April 1)

NAIC Group Code: 4745 NAIC Company Code: 95696

Description of allocation methodology:
All management and administrative services are performed on behalf of TVHP by the parent company, BCBSVT. The expense allocations utilized in preparing TVHP's Supplemental Health Care Exhibit were built from BCBSVT's previously existing cost allocations used in the completion of the Analysis of Operations by Line of Business (page 7) and the Underwriting & Investment Exhibit - Part 3 (page 14). The existing system already allocated expenses between the BAE, CCE, and GAE categories, by expense line and by cost center/department. For purposes of completing the Supplemental Health Care Exhibit, TVHP first identified all incurred QI expenses that were determined to meet the definitions developed by the NAIC. These included both allocated expenses from BCBSVT, and direct expenses incurred by TVHP. The expenses were allocated between the 5 QI categories by specifically identifying the costs associated with performing the QI activities, by department and by expense line, and aligning them based on our interpretation of the definitions and examples provided for each of the 5 categories in the instructions. As the QI expenses are a subset of TVHP's overall administrative costs, the QI items were allocated by BAE/CCE/GAE category in proportion to how the applicable expense line within the particular department was allocated in the overall cost accounting system. As TVHP's operations are confined to the State of Vermont, there was no allocation of expenses between states/jurisdictions. With respect to the services described in the table below, with the exception of disease management, all functions are performed by BCBSVT on behalf of TVHP, and the associated costs represent TVHP's allocated share of BCBSVT expenses.

Detailed Description of Quality Improvement Expenses:

1 Expense Type from Part 3	2 New	3 Detailed Description of Expense
Improve Health Outcomes		
Disease management		Through an external vendor, TVHP provides disease management services to virtually all of its members for specific diseases/conditions. The vendor guarantees a minimum ROI.
Case management / care coordination		BCBSVT maintains a staff of physicians and registered nurses who work with members to manage and coordinate their medical care to improve overall health outcomes. These activities include making and verifying appointments, helping to manage transitions from one setting to another, and providing coaching and support.
Pharmacy management		Through an external vendor, BCBSVT works with members and providers to encourage the most appropriate drug usage that will limit potential risk to the member while maximizing the benefit.
NCQA accreditation activities		BCBSVT and TVHP are NCQA accredited, and BCBSVT performs many activities related to maintaining both accreditations. These include direct outreach to providers, educational programs, and review of utilization metrics to ensure proper care is being provided to members.
Better Beginnings program		BCBSVT and TVHP provide a specialized program to work with expectant parents, which includes providing educational materials, credits for lactation consulting services and Red Cross CPR training, and other materials to encourage a successful pregnancy and healthy birth. There is a separate component to the program for parents of young children, which includes counseling and other educational materials related to vaccinations, etc. These programs are administered by registered nurses.
Activities to Prevent Hospital Readmission		
Case management		As part of the overall case management program, BCBSVT's registered nurse staff also actively works with members on discharge planning, and post discharge counseling to reduce the likelihood of future readmission.
Improve Patient Safety and Reduce Medical Errors		
Prospective drug utilization review		Through an external vendor, BCBSVT monitors prescription usage for potential adverse drug interactions, and advises on step therapy treatments. BCBSVT's Quality Improvement department reviews data and works with providers on the identification and use of best clinical practices and to encourage evidence based medicine in addressing clinical errors and safety concerns.
Medical management review		
Wellness & Health Promotion Activities		
Worksite wellness assessments		Wellness assessments and biometric screenings are performed at employer worksites.
Public health education events in conjunction with state health department		BCBSVT sponsors various events in conjunction with state and local health departments in order to encourage healthy lifestyles and physical activity. These include the Walk at Lunch program, a Hike, Bike and Paddle program, and many others that are open to members as well as to the community at large.
HIT Expenses for Health Care Quality Improvements		
HEDIS reporting		BCBSVT completes various reporting of HEDIS measures for public reporting mandated by VT law.
NCQA accreditation		As part of the NCQA accreditation process, BCBSVT performs many activities related to reporting and analysis of clinical effectiveness and related measures.
